

How to batch read from files in C# and ByteScout BarCode Reader SDK

The tutorial below will demonstrate how to batch read from files in C#

These sample source codes on this page below are demonstrating how to batch read from files in C#. What is ByteScout BarCode Reader SDK? It is the barcode decoder with support for code 39, code 128, QR Code, Datamatrix, GS1, PDF417 and all other popular barcodes. Can read barcodes from images, pdf, tiff documents and live web camera. Supports noisy and damaged documents, can split and merge pdf and tiff documents based on barcodes. Can export barcode decoder results to XML, JSON, CSV and into custom data structures. It can help you to batch read from files in your C# application.

The SDK samples like this one below explain how to quickly make your application do batch read from files in C# with the help of ByteScout BarCode Reader SDK. Follow the instructions from the scratch to work and copy the C# code. This basic programming language sample code for C# will do the whole work for you to batch read from files.

Free trial version of ByteScout BarCode Reader SDK is available on our website. Documentation and source code samples are included.

Source Code Files:

```

using System;
using System.IO;
using Bytescout.BarCodeReader;

namespace BatchProcessing
{
    class Program
    {
        static void Main()
        {
            // Get all JPG files from the current folder
            string[] filesToScan = Directory.GetFiles(Directory.GetCurrentDirectory(),

            // Open file to export results
            StreamWriter resultsCsvFile = File.CreateText("results.csv");

            // Create barcode reader instance
            Reader reader = new Reader();
            reader.RegistrationName = "demo";
            reader.RegistrationKey = "demo";

            // Set barcode types for searching
            reader.BarcodeTypesToFind.EAN13 = true;

            // Iterate over images and read barcodes
            foreach (string file in filesToScan)
            {
                Console.WriteLine();
                Console.WriteLine("Reading barcodes from image \"{0}\"...", file);

                /* -----
                NOTE: We can read barcodes from specific page to increase performance
                For sample please refer to "Decoding barcodes from PDF by pages" progr
                -----

                // Read barcodes from image
                FoundBarcode[] barcodes = reader.ReadFrom(file);

                // Display results in console
                foreach (FoundBarcode barcode in barcodes)
                    Console.WriteLine("Found barcode with type \"{0}\" and value \"{1}\"", barcode.Type, barcode.Value);

                // Write results to file in CSV format. Note, you can also export to T
                string csv = reader.ExportFoundBarcodesToCSV();
                resultsCsvFile.Write(csv);
            }

            // Cleanup
            reader.Dispose();
            resultsCsvFile.Dispose();

            Console.WriteLine("Press any key to exit..");
            Console.ReadKey();
        }
    }
}

```

```
}  
}
```
