

How to generate barcode with webimage control in c# in ASP.NET with ByteScout Barcode SDK

This tutorial will show how to generate barcode with webimage control in c# in ASP.NET

Learn how to generate barcode with webimage control in c# in ASP.NET with this source code sample. ByteScout Barcode SDK is the robust library (Software Development Kit) that is designed for automatic generation of high-quality barcodes for printing, electronic documents and pdf. All popular barcode types are supported from Code 39 and Code 129 to QR Code, UPC, GS1, GS-128, Datamatrix, PDF417, Maxicode and many others. Provides support for full customization of fonts, colors, output and printing sizes. Special tools are included to verify output quality and printing quality. Can add generated barcode into new or existing documents, images and PDF and you can use it to generate barcode with webimage control in c# with ASP.NET.

ASP.NET code samples for ASP.NET developers help to speed up coding of your application when using ByteScout Barcode SDK. In your ASP.NET project or application you may simply copy & paste the code and then run your app! Enjoy writing a code with ready-to-use sample codes in ASP.NET.

Our website provides trial version of ByteScout Barcode SDK for free. It also includes documentation and source code samples.

Source Code Files:

```
</html>
```

Default.aspx.cs

```
using System;
using System.Data;
using System.Configuration;
using System.Collections;
using System.Web;
using System.Web.Security;
using System.Web.UI;
using System.Web.UI.WebControls;
using System.Web.UI.WebControls.WebParts;
using System.Web.UI.HtmlControls;

namespace BarcodeWebImageTester
{
    public partial class _Default : System.Web.UI.Page
    {
        /*
        IF YOU SEE TEMPORARY FOLDER ACCESS ERRORS:

        Temporary folder access is required for web application when you use ByteScout
        If you are getting errors related to the access to temporary folder like "Access
        denied" or "Access to the path is denied"

        SOLUTION:

        If your IIS Application Pool has "Load User Profile" option enabled the IIS pro
        cess runs under the user profile of the user who installed IIS. If you are running Web Application under an impersonated account or IIS_IUSRS g
        roup, you will get the "Access denied" error.

        In this case
        - check the User or User Group your web application is running under
        - then add permissions for this User or User Group to read and write into that
        - restart your web application and try again

        */

        protected void Page_Load(object sender, EventArgs e)
        {

        }
    }
}
```
