

postnet barcode in C# using ByteScout Barcode SDK

Write code in C# to make postnet barcode with this How-To tutorial

ByteScout tutorials explain the material for programmers who use C#. ByteScout Barcode SDK was made to help with postnet barcode in C#. ByteScout Barcode SDK is the robust library (Software Development Kit) that is designed for automatic generation of high-quality barcodes for printing, electronic documents and pdf. All popular barcode types are supported from Code 39 and Code 129 to QR Code, UPC, GS1, GS-128, Datamatrix, PDF417, Maxicode and many others. Provides support for full customization of fonts, colors, output and printing sizes. Special tools are included to verify output quality and printing quality. Can add generated barcode into new or existing documents, images and PDF.

This rich sample source code in C# for ByteScout Barcode SDK includes the number of functions and options you should do calling the API to implement postnet barcode. In order to implement this functionality, you should copy and paste code below into your app using code editor. Then compile and run your application. Code testing will allow the function to be tested and work properly with your data.

Free trial version of ByteScout Barcode SDK is available on our website. Get it to try other samples for C#.

```
using System;
using System.Collections.Generic;
using System.Text;
using System.Diagnostics;

using ByteScout.BarCode;

namespace Sample
{
    class Program
    {
        static void Main(string[] args)
        {
            // Create new barcode
            Barcode barcode = new Barcode();

            // Set symbology
            barcode.Symbology = SymbologyType.Postnet;
            // Set value
            barcode.Value = "12345";

            // Save barcode to image
            barcode.SaveImage("result.png");

            // Show image in default image viewer
            Process.Start("result.png");
        }
    }
}
```
