datamatrix with binary data in VB.NET using ByteScout Barcode SDK

datamatrix with binary data in VB.NET

The sample source codes on this page will demonstrate you how to make datamatrix with binary data in VB.NET. ByteScout Barcode SDK was made to help with datamatrix with binary data in VB.NET. ByteScout Barcode SDK is the fully featured library to generate barcodes. Supports QR Code, Code 39, Code 128, UPC, GS1, GS-128, PDF417, Datamatrix and many other barcode types. Includes various options for barcode generation to ensure output quality, add barcodes to new or existing pdf files and images.

This rich sample source code in VB.NET for ByteScout Barcode SDK includes the number of functions and options you should do calling the API to implement datamatrix with binary data. Follow the instruction from the scratch to work and copy and paste code for VB.NET into your editor. Code testing will allow the function to be tested and work properly with your data.

Trial version can be obtained from our website for free. It includes this and other source code samples for VB.NET.

Source Code Files:

Program.vb

```vbnet
Imports System.Diagnostics
Imports System.Text
Imports Bytescout.BarCode

Class Program
        Friend Shared Sub Main(args As String())
                ' Create Barcode component instance
                Using barcode As New Barcode()
                        barcode.RegistrationName = "demo"
                        barcode.RegistrationKey = "demo"

                        ' Set barcode type
                barcode.Symbology = SymbologyType.DataMatrix
                        ' Force binary mode
                barcode.Options.DataMatrixCompactionMode = DataMatrixCompactionMode.Binary

                        ' Sample byte array to use as value
                Dim byteArray As Byte() = New Byte() {0, 10, 11, 12, 13, 14, 15, &HFF}

                        ' Set value by converting byte array to string
                barcode.Value = Encoding.Default.GetString(byteArray)

                        ' Save barcode image
                        barcode.SaveImage("result.png")

                        ' Open output image in default associated application
                        Process.Start("result.png")
                End Using
        End Sub
End Class
```
