

fonts available for cells with spreadsheet sdk in C# and ByteScout Barcode Suite

fonts available for cells with spreadsheet sdk in C#

Easy to understand coding instructions are written to assist you to try-out the features without the requirement to write your own code. Fonts available for cells with spreadsheet sdk in C# can be applied with ByteScout Barcode Suite. ByteScout Barcode Suite is the set that includes three different SDK products to generate barcodes, read barcodes and read and write spreadsheets: Barcode SDK, Barcode Reader SDK and Spreadsheet SDK.

This rich and prolific sample source code in C# for ByteScout Barcode Suite contains various functions and options you should do calling the API to implement fonts available for cells with spreadsheet sdk. To use fonts available for cells with spreadsheet sdk in your C# project or application just copy & paste the code and then run your app! Further improvement of the code will make it more robust.

On our website you may get trial version of ByteScout Barcode Suite for free. Source code samples are included to help you with your C# application.

```
using System;
using System.Collections.Generic;
using System.Text;
using System.Diagnostics;
using Bytescout.Spreadsheet;
using System.IO;

namespace HelloWorld
{
    class Program
    {
        static void Main(string[] args)
        {
            // Create new Spreadsheet
            Spreadsheet document = new Spreadsheet();

            // Add new worksheet
            Worksheet worksheet = document.Workbook.Worksheets.Add("HelloWorld");

            // Create array with font names
            string[] fontNames = new string[] {
                "Helvetica",
                "Times New Roman",
                "Verdana",
                "Times New Roman"
            };

            // Use all fonts in fontNames array
            for (int i = 0; i < fontNames.Length; i++)
            {
                // Set font size based on loop counter
                float fontSize = 10 + i * 3;

                //Set cell font type and font size
                worksheet.Cell(i, 0).Font = new System.Drawing.Font(fontNames[i], fontS

                // Set cell value
                worksheet.Cell(i, 0).Value = fontNames[i];
            }

            // delete output file if exists already
            if (File.Exists("Fonts.xls")){
                File.Delete("Fonts.xls");
            }

            // Save document
            document.SaveAs("Fonts.xls");

            // Close document
            document.Close();

            // open generated XLS document in default program
            Process.Start("Fonts.xls");
        }
    }
}
```

```
}
```
