

line styles in cells with spreadsheet sdk in C# using ByteScout Barcode Suite

Simple tutorial on how to do line styles in cells with spreadsheet sdk in C#

Writing of the code to line styles in cells with spreadsheet sdk in C# can be done by developers of any level using ByteScout Barcode Suite. ByteScout Barcode Suite was created to assist line styles in cells with spreadsheet sdk in C#. ByteScout Barcode Suite is the set that includes three different SDK products to generate barcodes, read barcodes and read and write spreadsheets: Barcode SDK, Barcode Reader SDK and Spreadsheet SDK.

This rich and prolific sample source code in C# for ByteScout Barcode Suite contains various functions and options you should do calling the API to implement line styles in cells with spreadsheet sdk. If you want to know how it works, then this C# sample code should be copied and pasted into your application's code editor. Then just compile and run it. Want to see how it works with your data then code testing will allow the function to be tested and work properly.

If you want to try other samples for C# then free trial version of ByteScout Barcode Suite is available on our website.

using System.IO;

namespace HelloWorld
{
    class Program
    {
        static void Main(string[] args)
        {
            // Create new Spreadsheet
            Spreadsheet document = new Spreadsheet();

            // Get worksheet by name
            Worksheet worksheet = document.Workbook.Worksheets.Add();

            // Number of cell in the first column
            int cellRow = 0;

            // Apply all line styles
            foreach (LineStyle lineStyle in Enum.GetValues(typeof(Linestyle)))
            {
                // Set current cell
                Cell currentCell = worksheet.Cell(cellRow, 0);

                // Set border styles
                currentCell.RightBorderStyle = lineStyle;
                currentCell.LeftBorderStyle = lineStyle;
                currentCell.TopBorderStyle = lineStyle;
                currentCell.BottomBorderStyle = lineStyle;

                // Print style name
                currentCell.Value = lineStyle.ToString();

                // Choose next row
                cellRow += 2;
            }

            // delete output file if exists already
            if (File.Exists("LineTypes.xls")){
                File.Delete("LineTypes.xls");
            }

            // Save document
            document.SaveAs("LineTypes.xls");

            // Close document
            document.Close();

            // open generated XLS document in default program
        }
    }
}
```

```
        Process.Start("LineTypes.xls");  
    }  
}  
}
```
