# How to remove rows from existing spreadsheet with spreadsheet sdk in C# and ByteScout Barcode Suite

Learning is essential in computer world and the tutorial below will demonstrate how to remove rows from existing spreadsheet with spreadsheet sdk in C#

The code displayed below will guide you to install an C# app to remove rows from existing spreadsheet with spreadsheet sdk. ByteScout Barcode Suite is the bundle that privides 3 SDK products to generate barcodes (Barcode SDK), read barcodes (Barcode Reaer SDK) and read and write spreadsheets (Spreadsheet SDK). It can be applied to remove rows from existing spreadsheet with spreadsheet sdk using C#.

Want to save time? You will save a lot of time on writing and testing code as you may just take the C# code from ByteScout Barcode Suite for remove rows from existing spreadsheet with spreadsheet sdk below and use it in your application. This C# sample code is all you need for your app. Just copy and paste the code, add references (if needs to) and you are all set! Further improvement of the code will make it more robust.

Our website gives trial version of ByteScout Barcode Suite for free. It also includes documentation and source code samples.

# Source Code Files:

Program.cs

```csharp
using System;
using System.Collections.Generic;
using System.Text;
using Bytescout.Spreadsheet;
using System.Diagnostics;
using System.IO;

namespace Removing_rows_from_existing_XLS
{
    class Program
    {
        static void Main(string[] args)
        {
            // Open Spreadsheet
            Spreadsheet document = new Spreadsheet();
            document.LoadFromFile("AdvancedReport.xls");

            // Get Worksheet
            Worksheet worksheet = document.Workbook.Worksheets[0];

            // Remove row
            worksheet.Rows.Delete(5, 5);

            // delete output file if exists already
            if (File.Exists("Output.xls")){
                File.Delete("Output.xls");
            }

            // Save document
            document.SaveAs("Output.xls");

            // Close Spreadsheet
            document.Close();

            // open generated XLS document in default program
            Process.Start("Output.xls");
        }
    }
}
```
