How to copypaste rows with spreadsheet sdk in VB.NET and ByteScout Barcode Suite

Continuous learning is a crucial part of computer science and this tutorial shows how to copypaste rows with spreadsheet sdk in VB.NET

The code displayed below will guide you to install an VB.NET app to copypaste rows with spreadsheet sdk. ByteScout Barcode Suite: the bundle that privides 3 SDK products to generate barcodes (Barcode SDK), read barcodes (Barcode Reaer SDK) and read and write spreadsheets (Spreadsheet SDK). It can copypaste rows with spreadsheet sdk in VB.NET.

The SDK samples given below describe how to quickly make your application do copypaste rows with spreadsheet sdk in VB.NET with the help of ByteScout Barcode Suite. Just copy and paste the code into your VB.NET application's code and follow the instructions. Use of ByteScout Barcode Suite in VB.NET is also described in the documentation included along with the product.

Our website gives trial version of ByteScout Barcode Suite for free. It also includes documentation and source code samples.

Program.vb

```vb
Imports System.Collections.Generic
Imports System.Diagnostics
Imports System.IO
Imports System.Text
Imports Bytescout.Spreadsheet

Class Program
        Friend Shared Sub Main(args As String())
                ' Open spreadsheet from file
                Dim document As New Spreadsheet()
                document.LoadFromFile("example.xls")
                ' document.LoadFromFile(@"d:\2\1\Bytescout\Spreadsheet SDK\TestCase\Fo

                ' Get first worksheet
                Dim worksheet As Worksheet = document.Workbook.Worksheets(0)

                ' Copy first eight rows to the 10th row
                worksheet.Rows.CopyAndPaste(0, 7, 9)

                ' Delete output file if exists
                If File.Exists("changed.xls") Then
                        File.Delete("changed.xls")
                End If

                ' Save document
                document.SaveAs("changed.xls")

                ' Close spreadsheet
                document.Close()

                ' Open generated XLS document in default program
                Process.Start("changed.xls")
        End Sub
End Class
