Source Code Files:

```
Imports System.Diagnostics
Imports System.IO
Imports Bytescout.Spreadsheet
Class Program
        Friend Shared Sub Main(args As String())
                ' Open spreadsheet from file
                Dim document As New Spreadsheet()
                document.LoadFromFile("example.xls")
                ' Get first worksheet
                Dim worksheet As Worksheet = document.Workbook.Worksheets(0)
                'Hide first three columns
                worksheet.Columns(0).Hidden = True
                worksheet.Columns(1).Hidden = True
                worksheet.Columns(2).Hidden = True
                'Hide first three rows
                worksheet.Rows(0).Hidden = True
                worksheet.Rows(1).Hidden = True
                worksheet.Rows(2).Hidden = True
                ' Delete output file if exists
                If File.Exists("changed.xls") Then
                        File.Delete("changed.xls")
                End If
                ' Save document
                document.SaveAs("changed.xls")
                ' Close spreadsheet
                document.Close()
                ' Open generated XLS document in default program
                Process.Start("changed.xls")
        End Sub
End Class
```
