

## How to convert web page to PDF from link for HTML to PDF API in PowerShell using ByteScout Cloud API Server

### Step By Step Instructions on how to convert web page to PDF from link for HTML to PDF API in PowerShell

If you want a quick and easy way to add a required functionality into your application then check this sample source code documentation. ByteScout Cloud API Server was designed to assist HTML to PDF API in PowerShell. ByteScout Cloud API Server is the ready to use Web API Server that can be deployed in less than 30 minutes into your own in-house server or into private cloud server. Can store data on in-house local server based storage or in Amazon AWS S3 bucket. Processing data solely on the server using built-in ByteScout powered engine, no cloud services are used to process your data!.

This simple and easy to understand sample source code in PowerShell for ByteScout Cloud API Server contains different functions and options you should do calling the API to implement HTML to PDF API. Follow the tutorial and copy - paste code for PowerShell into your project's code editor. Enjoy writing a code with ready-to-use sample PowerShell codes to add HTML to PDF API functions using ByteScout Cloud API Server in PowerShell.

Our website provides free trial version of ByteScout Cloud API Server that gives source code samples to assist with your PowerShell project.

### Source Code Files:

## ConvertWebPageToPdfFromLink.ps1

```
# Please NOTE: In this sample we're assuming Cloud Api Server is hosted at "https://lo
# If it's not then please replace this with with your hosting url.

# URL of web page to convert to PDF document.
$SourceUrl = "http://www.usa.gov"
# Destination PDF file name
$DestinationFile = ".\result.pdf"

# Prepare URL for `Web Page to PDF` API call
$query = "https://localhost/pdf/convert/from/url?name=$(Split-Path $DestinationFile -Le
$query = [System.Uri]::EscapeUriString($query)

try {
    # Execute request
    $jsonResponse = Invoke-RestMethod -Method Get -Uri $query

    if ($jsonResponse.error -eq $false) {
        # Get URL of generated PDF file
        $resultFileUrl = $jsonResponse.url;

        # Download PDF file
        Invoke-WebRequest -OutFile $DestinationFile -Uri $resultFileUrl

        Write-Host "Generated PDF file saved as `"$($DestinationFile)`" file."
    }
    else {
        # Display service reported error
        Write-Host $jsonResponse.message
    }
}
catch {
    # Display request error
    Write-Host $_.Exception
}
```

run.bat

```
@echo off

powershell -NoProfile -ExecutionPolicy Bypass -Command "& .\ConvertWebPageToPdfFromLin
echo Script finished with errorlevel=%errorlevel%

pause
```
