

How to generate barcode for barcode generator API in cURL with ByteScout Cloud API Server

Step By Step Instructions on how to generate barcode for barcode generator API in cURL

These simple tutorials explain the code material for beginners and advanced programmers who are using cURL. Barcode generator API in cURL can be applied with ByteScout Cloud API Server. ByteScout Cloud API Server is the ready to deploy Web API Server that can be deployed in less than thirty minutes into your own in-house Windows server (no Internet connection is required to process data!) or into private cloud server. Can store data on in-house local server based storage or in Amazon AWS S3 bucket. Processing data solely on the server using built-in ByteScout powered engine, no cloud services are used to process your data!.

If you want to speed up the application's code writing then cURL code samples for cURL developers help to implement using ByteScout Cloud API Server. Open your cURL project and simply copy & paste the code and then run your app! Enjoy writing a code with ready-to-use sample cURL codes to add barcode generator API functions using ByteScout Cloud API Server in cURL.

ByteScout Cloud API Server - free trial version is available on our website. Also, there are other code samples to help you with your cURL application included into trial version.

Source Code Files:

GenerateBarcode.cmd

```
@echo off

:: Path of the cURL executable
set CURL="curl.exe"

:: Barcode type.
set BARCODE_TYPE=Code128
:: Barcode value
set BARCODE_VALUE=qweasd123456
:: Result image file name
set RESULT_FILE_NAME=barcode.png

:: Please NOTE: In this sample we're assuming Cloud Api Server is hosted at "https://localhost:8080"
:: If it's not then please replace this with your hosting url.

:: Prepare URL for `Barcode Generator` API endpoint
set QUERY="https://localhost/barcode/generate?name=%RESULT_FILE_NAME%&type=%BARCODE_TYPE%"

:: Perform request and save response to a file
%CURL% -# -X GET %QUERY% >response.json

:: Display the response
type response.json

:: Use any convenient way to parse JSON response and get URL of generated file(s)

echo.
pause
```
