

How to import from list with spreadsheet sdk in C# with ByteScout Data Extraction Suite

Learn to code in C# to import from list with spreadsheet sdk with this step-by-step tutorial

Import from list with spreadsheet sdk is simple to apply in C# if you use these source codes below. ByteScout Data Extraction Suite is the set that includes 3 SDK products for data extraction from PDF, scans, images and from spreadsheets: PDF Extractor SDK, Data Extraction SDK, Barcode Reader SDK and you can use it to import from list with spreadsheet sdk with C#.

Want to quickly learn? This fast application programming interfaces of ByteScout Data Extraction Suite for C# plus the guidelines and the code below will help you quickly learn how to import from list with spreadsheet sdk. This C# sample code is all you need for your app. Just copy and paste the code, add references (if needs to) and you are all set! Enjoy writing a code with ready-to-use sample codes in C#.

The trial version of ByteScout Data Extraction Suite can be downloaded for free from our website. It also includes source code samples for C# and other programming languages.

Program.cs

```

using System.Collections;
using System.Diagnostics;
using System.IO;

namespace Bytescout.Spreadsheet.Demo.Csharp.ImportFromList
{
    class Program
    {
        static void Main(string[] args)
        {
            const string fileName = "CSharpImportFromList.xls";

            // Create a new spreadsheet
            Spreadsheet spreadsheet = new Spreadsheet();

            // Get the data from the 2D array that we want to import
            IList planets = GetList();

            // Import data into spreadsheet
            spreadsheet.ImportFromList(planets);

            // Save the spreadsheet
            if (File.Exists(fileName)) File.Delete(fileName);
            spreadsheet.SaveAs(fileName);

            // Close spreadsheet
            spreadsheet.Close();

            // Open the spreadsheet
            Process.Start(fileName);
        }

        /// <summary>
        /// Creates a list of planets
        /// </summary>
        /// <returns>List of planets</returns>
        private static IList GetList()
        {
            string[,] planets = new string[9,1];
            planets[0,0] = "Mercury";
            planets[1,0] = "Venus";
            planets[2,0] = "Earth";
            planets[3,0] = "Mars";
            planets[4,0] = "Jupiter";
            planets[5,0] = "Saturn";
            planets[6,0] = "Uranus";
            planets[7,0] = "Neptune";
            planets[8,0] = "Pluto";

            return planets;
        }
    }
}
