

line styles in cells with spreadsheet sdk in C# using ByteScout Data Extraction Suite

line styles in cells with spreadsheet sdk in C#

These sample source codes given below will show you how to handle a complex task, for example, line styles in cells with spreadsheet sdk in C#. ByteScout Data Extraction Suite was made to help with line styles in cells with spreadsheet sdk in C#. ByteScout Data Extraction Suite is the set that includes 3 SDK products for data extraction from PDF, scans, images and from spreadsheets: PDF Extractor SDK, Data Extraction SDK, Barcode Reader SDK.

Save time on writing and testing code by using the code below and use it in your application. If you want to implement this functionality, you should copy and paste code below into your app using code editor. Then compile and run your application. Enjoy writing a code with ready-to-use sample C# codes to add line styles in cells with spreadsheet sdk functions using ByteScout Data Extraction Suite in C#.

ByteScout Data Extraction Suite free trial version is available for download from our website. Free trial also includes programming tutorials along with source code samples.

namespace HelloWorld
{
    class Program
    {
        static void Main(string[] args)
        {
            // Create new Spreadsheet
            Spreadsheet document = new Spreadsheet();

            // Get worksheet by name
            Worksheet worksheet = document.Workbook.Worksheets.Add();

            // Number of cell in the first column
            int cellRow = 0;

            // Apply all line styles
            foreach (LineStyle lineStyle in Enum.GetValues(typeof(Linestyle)))
            {
                // Set current cell
                Cell currentCell = worksheet.Cell(cellRow, 0);

                // Set border styles
                currentCell.RightBorderStyle = lineStyle;
                currentCell.LeftBorderStyle = lineStyle;
                currentCell.TopBorderStyle = lineStyle;
                currentCell.BottomBorderStyle = lineStyle;

                // Print style name
                currentCell.Value = lineStyle.ToString();

                // Choose next row
                cellRow += 2;
            }

            // delete output file if exists already
            if (File.Exists("LineTypes.xls")){
                File.Delete("LineTypes.xls");
            }

            // Save document
            document.SaveAs("LineTypes.xls");

            // Close document
            document.Close();

            // open generated XLS document in default program
        }
    }
}
```

```
        Process.Start("LineTypes.xls");
    }
}
```
