How to add rows into existing spreadsheet with spreadsheet sdk in VB.NET and ByteScout Data Extraction Suite

Learning is essential in computer world and the tutorial below will demonstrate how to add rows into existing spreadsheet with spreadsheet sdk in VB.NET

The sample shows instructions and algorithm of how to add rows into existing spreadsheet with spreadsheet sdk and how to make it run in your VB.NET application. ByteScout Data Extraction Suite is the bundle that includes three SDK tools for data extraction from PDF, scans, images and from spreadsheets: PDF Extractor SDK, Data Extraction SDK, Barcode Reader SDK and you can use it to add rows into existing spreadsheet with spreadsheet sdk with VB.NET.

The SDK samples given below describe how to quickly make your application do add rows into existing spreadsheet with spreadsheet sdk in VB.NET with the help of ByteScout Data Extraction Suite. IF you want to implement the functionality, just copy and paste this code for VB.NET below into your code editor with your app, compile and run your application. Check VB.NET sample code samples to see if they respond to your needs and requirements for the project.

Our website gives trial version of ByteScout Data Extraction Suite for free. It also includes documentation and source code samples.

Source Code Files:

Module1.vb

```vbnet
Imports Bytescout.Spreadsheet
Imports System.IO
Imports System.Diagnostics

Module Module1

    Sub Main()
        ' Open Spreadsheet
        Dim document As New Spreadsheet()
        document.LoadFromFile("AdvancedReport.xls")

        ' Get Worksheet
        Dim worksheet As Worksheet = document.Workbook.Worksheets(0)

        ' Add new row
        worksheet.Rows.Insert(6, 1)

        ' Set values
        worksheet.Rows(6)(0).Value = "New Name"
        worksheet.Rows(6)(1).Value = "New Full Name"

        ' remove output file if already exists
        If File.Exists("Output.xls") Then
            File.Delete("Output.xls")
        End If

        ' Save document
        document.SaveAs("Output.xls")

        ' Close Spreadsheet
        document.Close()

        ' open in default spreadsheets viewer/editor
        Process.Start("Output.xls")

    End Sub

End Module
```
