Program.vb

```vb
Imports System.Drawing
Imports Bytescout.PDFExtractor

Namespace FindText

        Class Program

                Friend Shared Sub Main(args As String())

            ' Create Bytescout.PDFExtractor.TextExtractor instance
                        Dim extractor As New TextExtractor()
                        extractor.RegistrationName = "demo"
                        extractor.RegistrationKey = "demo"

                        ' Load sample PDF document
                        extractor.LoadDocumentFromFile(".\sample2.pdf")

                        Dim pageCount As Integer = extractor.GetPageCount()

                        ' Search each page for some keyword
                        For i As Integer = 0 To pageCount - 1
                                If extractor.Find(i, "References", False) Then
                                        ' If page contains the keyword, extract a text
                                        ' For demonstration we'll extract the text fror
                                        extractor.SetExtractionArea(0, 0, 600, 200)
                                        Dim text As String = extractor.GetTextFromPage
                                        Console.WriteLine(text)
                                End If
                        Next

                        ' Cleanup
                        extractor.Dispose()

                        Console.WriteLine()
                        Console.WriteLine("Press any key to continue...")
                        Console.ReadLine()

                End Sub

        End Class

End Namespace
