Source Code Files:

```
Imports Bytescout.PDFExtractor
```

```
Class Program
```

```
    Friend Shared Sub Main(args As String())
```

```
        Dim extractor As TextExtractor = New TextExtractor("demo", "demo")
```

```
        ' Load the document
```

```
        extractor.LoadDocumentFromFile("sample2.pdf")
```

```
        ' Smart match the search string like Adobe Reader
```

```
        extractor.WordMatchingMode = WordMatchingMode.SmartMatch
```

```
        Dim searchString As String = "land"
```

```
        ' Get page count
```

```
        Dim pageCount As Integer = extractor.GetPageCount()
```

```
        ' Iterate through pages
```

```
        For i As Integer = 0 To pageCount - 1
```

```
            ' Search through page
```

```
            If extractor.Find(i, searchString, False) Then
```

```
                Do
```

```
                    ' Output search results
```

```
                    Console.WriteLine("Found on page " + i.ToString() + " at location "
```

```
                    ' Now we are getting the found text
```

```
                    Dim extractedString As String = extractor.FoundText.Text
```

```
                    Console.WriteLine("Found text: " + extractedString)
```

```
                    Loop While extractor.FindNext() ' Search next occurrence of the search
```

```
                End If
```

```
            Next
```

```
            ' Cleanup
```

```
            extractor.Dispose()
```

```
        Console.WriteLine()
```

```
        Console.WriteLine("Press any key to exit...")
```

```
        Console.ReadKey()
```

```
    End Sub
```

```
End Class
```
