

How to merge two documents with spreadsheet sdk in VB.NET and ByteScout Data Extraction Suite

Learning is essential in computer world and the tutorial below will demonstrate how to merge two documents with spreadsheet sdk in VB.NET

This sample source code below will display you how to merge two documents with spreadsheet sdk in VB.NET. Want to merge two documents with spreadsheet sdk in your VB.NET app? ByteScout Data Extraction Suite is designed for it. ByteScout Data Extraction Suite is the set that includes 3 SDK products for data extraction from PDF, scans, images and from spreadsheets: PDF Extractor SDK, Data Extraction SDK, Barcode Reader SDK.

The following code snippet for ByteScout Data Extraction Suite works best when you need to quickly merge two documents with spreadsheet sdk in your VB.NET application. IF you want to implement the functionality, just copy and paste this code for VB.NET below into your code editor with your app, compile and run your application. This basic programming language sample code for VB.NET will do the whole work for you to merge two documents with spreadsheet sdk.

If you want to try other source code samples then the free trial version of ByteScout Data Extraction Suite is available for download from our website. Just try other source code samples for VB.NET.

Source Code Files:

Module1.vb

```
Imports System
Imports System.Collections.Generic
Imports System.Text
Imports Bytescout.Spreadsheet
Imports System.Diagnostics
Imports System.IO

Module Module1

    Sub Main()
        ' Open existing Spreadsheets
        Dim document1 As New Spreadsheet()
        document1.LoadFromFile("workbook1.xls")

        Dim document2 As New Spreadsheet()
        document2.LoadFromFile("workbook2.xls")

        ' Create output document
        Dim document3 As New Spreadsheet()

        ' Add new worksheet
        document3.Workbook.Worksheets.Add()

        ' Target row
        Dim targetRow As Integer = 0
        For i As Integer = 0 To 9

            ' Copy cells from first document
            For j As Integer = 0 To 11
                document3.Worksheet(0).Cell(targetRow, j).Value = document1.Worksheet(0).Cell(j, targetRow).Value
            Next
            targetRow += 1
        Next
        For i As Integer = 0 To 9

            ' Copy cells from second document
            For j As Integer = 0 To 11
                document3.Worksheet(0).Cell(targetRow, j).Value = document2.Worksheet(0).Cell(j, targetRow).Value
            Next
            targetRow += 1
        Next

        ' remove output file if already exists
        If File.Exists("Output.xls") Then
            File.Delete("Output.xls")
        End If

        ' Save document
        document3.SaveAs("Output.xls")

        ' Close Spreadsheet
        document3.Close()
    End Sub
End Module
```

```
' open in default spreadsheets viewer/editor
Process.Start("Output.xls")
End Sub

End Module
```
