

How to remove rows from existing spreadsheet with spreadsheet sdk in VB.NET using ByteScout Data Extraction Suite

Continuous learning is a crucial part of computer science and this tutorial shows how to remove rows from existing spreadsheet with spreadsheet sdk in VB.NET

Every ByteScout tool includes simple example VB.NET source codes that you can get here or in the folder with installed ByteScout product. What is ByteScout Data Extraction Suite? It is the set that includes 3 SDK products for data extraction from PDF, scans, images and from spreadsheets: PDF Extractor SDK, Data Extraction SDK, Barcode Reader SDK. It can help you to remove rows from existing spreadsheet with spreadsheet sdk in your VB.NET application.

Want to save time? You will save a lot of time on writing and testing code as you may just take the VB.NET code from ByteScout Data Extraction Suite for remove rows from existing spreadsheet with spreadsheet sdk below and use it in your application. Just copy and paste the code into your VB.NET application's code and follow the instructions. Enjoy writing a code with ready-to-use sample VB.NET codes.

You can download free trial version of ByteScout Data Extraction Suite from our website with this and other source code samples for VB.NET.

Source Code Files:

```
Imports Bytescout.Spreadsheet
Imports System.IO

Module Module1

    Sub Main()
        ' Open Spreadsheet
        Dim document As New Spreadsheet()
        document.LoadFromFile("AdvancedReport.xls")

        ' Get Worksheet
        Dim worksheet As Worksheet = document.Workbook.Worksheets(0)

        ' Remove row
        worksheet.Rows.Delete(5, 5)

        ' remove output file if already exists
        If File.Exists("Output.xls") Then
            File.Delete("Output.xls")
        End If

        ' Save document
        document.SaveAs("Output.xls")

        ' Close Spreadsheet
        document.Close()

        ' open in default spreadsheets viewer/editor
        Process.Start("Output.xls")
    End Sub

End Module
```
