How to search text with spreadsheet sdk in VB.NET and ByteScout Data Extraction Suite

Learn to code in VB.NET to search text with spreadsheet sdk with this step-by-step tutorial

ByteScout simple and easy to understand tutorials are planned to describe the code for both VB.NET beginners and advanced programmers. Want to search text with spreadsheet sdk in your VB.NET app? ByteScout Data Extraction Suite is designed for it. ByteScout Data Extraction Suite is the set that includes 3 SDK products for data extraction from PDF, scans, images and from spreadsheets: PDF Extractor SDK, Data Extraction SDK, Barcode Reader SDK.

Want to quickly learn? This fast application programming interfaces of ByteScout Data Extraction Suite for VB.NET plus the guidelines and the code below will help you quickly learn how to search text with spreadsheet sdk. IF you want to implement the functionality, just copy and paste this code for VB.NET below into your code editor with your app, compile and run your application. Enjoy writing a code with ready-to-use sample VB.NET codes.

The trial version of ByteScout Data Extraction Suite can be downloaded for free from our website. It also includes source code samples for VB.NET and other programming languages.

Program.vb

```vb
Imports Bytescout.Spreadsheet
Imports Bytescout.Spreadsheet.BaseClasses

Class Program
        Friend Shared Sub Main(args As String())
                ' Open spreadsheet from file
                Dim document As New Spreadsheet()
                document.LoadFromFile("example.xls")

                ' Get first worksheet
                Dim worksheet As Worksheet = document.Workbook.Worksheets(0)

                ' Find cells containing "in" substring

        Dim cell As Cell = worksheet.Find("in", False, False, False) 'case insesitive,

                While cell IsNot Nothing
                        ' Print found cell address and value to console
                        Dim address As CellAddress = cell.GetAddress()
                        Dim message As String = String.Format("({0}, {1}): {2}", addres

                        Console.WriteLine(message)

                        cell = worksheet.FindNext()
                End While

                document.Dispose()

                Console.WriteLine()
                Console.WriteLine("Press any key to continue.")
                Console.ReadKey(True)
        End Sub
End Class
```
