

## How to set cell formula with spreadsheet sdk in VB.NET and ByteScout Data Extraction Suite

### Step-by-step tutorial on how to set cell formula with spreadsheet sdk in VB.NET

These source code samples are assembled by their programming language and functions they apply. ByteScout Data Extraction Suite is the set that includes 3 SDK products for data extraction from PDF, scans, images and from spreadsheets: PDF Extractor SDK, Data Extraction SDK, Barcode Reader SDK. It can set cell formula with spreadsheet sdk in VB.NET.

The following code snippet for ByteScout Data Extraction Suite works best when you need to quickly set cell formula with spreadsheet sdk in your VB.NET application. This VB.NET sample code is all you need for your app. Just copy and paste the code, add references (if needs to) and you are all set! Use of ByteScout Data Extraction Suite in VB.NET is also described in the documentation included along with the product.

ByteScout Data Extraction Suite free trial version is available on our website. VB.NET and other programming languages are supported.

### Source Code Files:

Module1.vb

```

Imports Bytescout.Spreadsheet
Imports System.IO

Module Module1

    Sub Main()
        ' Create new Spreadsheet
        Dim document As New Spreadsheet()

        ' add new worksheet
        Dim Sheet As Worksheet = document.Workbook.Worksheets.Add("FormulaDemo")

        ' headers to indicate purpose of the column
        Sheet.Cell("A1").Value = "Formula (as text)"
        ' set A column width
        Sheet.Columns(0).Width = 250

        Sheet.Cell("B1").Value = "Formula (calculated)"
        ' set B column width
        Sheet.Columns(1).Width = 250

        ' write formula as text
        Sheet.Cell("A2").Value = "7*3+2"
        ' write formula as formula
        Sheet.Cell("B2").Value = "=7*3+2"

        ' remove output file if already exists
        If File.Exists("Output.xls") Then
            File.Delete("Output.xls")
        End If

        ' Save document
        document.SaveAs("Output.xls")

        ' Close Spreadsheet
        document.Close()

        ' open in default spreadsheets viewer/editor
        Process.Start("Output.xls")

    End Sub

End Module
