

How to create simple spreadsheet with spreadsheet sdk in VBScript with ByteScout Data Extraction Suite

Continuous learning is a crucial part of computer science and this tutorial shows how to create simple spreadsheet with spreadsheet sdk in VBScript

The code displayed below will guide you to install an VBScript app to create simple spreadsheet with spreadsheet sdk. ByteScout Data Extraction Suite is the set that includes 3 SDK products for data extraction from PDF, scans, images and from spreadsheets: PDF Extractor SDK, Data Extraction SDK, Barcode Reader SDK. It can be applied to create simple spreadsheet with spreadsheet sdk using VBScript.

These VBScript code samples for VBScript guide developers to speed up coding of the application when using ByteScout Data Extraction Suite. IF you want to implement the functionality, just copy and paste this code for VBScript below into your code editor with your app, compile and run your application. This basic programming language sample code for VBScript will do the whole work for you to create simple spreadsheet with spreadsheet sdk.

The trial version of ByteScout Data Extraction Suite can be downloaded for free from our website. It also includes source code samples for VBScript and other programming languages.

Source Code Files:

```
Set document = CreateObject("Bytescout.Spreadsheet.Spreadsheet")

document.RegistrationName = "demo"
document.RegistrationKey = "demo"

' Add new worksheet
Set worksheet = document.Workbook.Worksheets.Add("HelloWorld")

' get cell value
Set cell = worksheet.Item(0,0) ' you can also use worksheet.Cell_2("A1") as well

' set cell value
cell.Value = "Hello, World!"

' delete output file if exists already
Set fso = CreateObject("Scripting.FileSystemObject")
If (fso.FileExists("Output.xls")) Then fso.DeleteFile("Output.xls")
Set fso = nothing

' save document
document.SaveAs "Output.xls"

' close Spreadsheet
Set document = Nothing
```
