

How to extract PDF document info in C# using ByteScout PDF Extractor SDK

The tutorial below will demonstrate how to extract PDF document info in C#

The code below will help you to implement an C# app to extract PDF document info. ByteScout PDF Extractor SDK is the Software Development Kit (SDK) that is designed to help developers with data extraction from unstructured documents like pdf, tiff, scans, images, scanned and electronic forms. The library is powered by OCR, computer vision and AI to provide unique functionality like table detection, automatic table structure extraction, data restoration, data restructuring and reconstruction. Supports PDF, TIFF, PNG, JPG images as input and can output CSV, XML, JSON formatted data. Includes full set of utilities like pdf splitter, pdf merger, searchable pdf maker. It can extract PDF document info in C#.

This rich sample source code in C# for ByteScout PDF Extractor SDK includes the number of functions and options you should do calling the API to extract PDF document info. This C# sample code is all you need for your app. Just copy and paste the code, add references (if needs to) and you are all set! Use of ByteScout PDF Extractor SDK in C# is also explained in the documentation included along with the product.

ByteScout free trial version is available for download from our website. It includes all these programming tutorials along with source code samples.

Source Code Files:

```
using System;
using Bytescout.PDFExtractor;

namespace ExtractInfo
{
    class Program
    {
        static void Main(string[] args)
        {
            // Create Bytescout.PDFExtractor.InfoExtractor instance
            InfoExtractor extractor = new InfoExtractor();
            extractor.RegistrationName = "demo";
            extractor.RegistrationKey = "demo";

            // Load sample PDF document
            extractor.LoadDocumentFromFile(@".\sample1.pdf");

            Console.WriteLine("Author:      " + extractor.Author);
            Console.WriteLine("Creator:    " + extractor.Creator);
            Console.WriteLine("Producer:   " + extractor.Producer);
            Console.WriteLine("Subject:    " + extractor.Subject);
            Console.WriteLine("Title:      " + extractor.Title);
            Console.WriteLine("CreationDate: " + extractor.CreationDate);
            Console.WriteLine("Keywords:    " + extractor.Keywords);
            Console.WriteLine("Bookmarks:   " + extractor.Bookmarks);
            Console.WriteLine("Encrypted:   " + extractor.Encrypted);

            // Cleanup
            extractor.Dispose();

            Console.WriteLine();
            Console.WriteLine("Press any key to continue...");
            Console.ReadLine();
        }
    }
}
```
