

How to convert PDF to CSV by pages in VB.NET and ByteScout PDF Extractor SDK

The tutorial shows how to convert PDF to CSV by pages in VB.NET

We made thousands of pre-made source code pieces for easy implementation in your own programming projects. ByteScout PDF Extractor SDK is the SDK is designed to help developers with pdf tables and pdf data extraction from unstructured documents like pdf, tiff, scans, images, scanned and electronic forms. The library is powered by OCR, computer vision and AI to provide unique functionality like table detection, automatic table structure extraction, data restoration, data restructuring and reconstruction. Supports PDF, TIFF, PNG, JPG images as input and can output CSV, XML, JSON formatted data. Includes full set of utilities like pdf splitter, pdf merger, searchable pdf maker and other utilities and you can use it to convert PDF to CSV by pages with VB.NET.

You will save a lot of time on writing and testing code as you may just take the VB.NET code from ByteScout PDF Extractor SDK for convert PDF to CSV by pages below and use it in your application. In your VB.NET project or application you may simply copy & paste the code and then run your app! Use of ByteScout PDF Extractor SDK in VB.NET is also explained in the documentation included along with the product.

Free trial version of ByteScout PDF Extractor SDK is available on our website. Documentation and source code samples are included.

Module1.vb

```
Imports System
Imports System.Collections.Generic
Imports System.Text
Imports Bytescout.PDFExtractor
Imports System.Diagnostics

Namespace ConsoleApplication1

    Class Program

        Shared Sub Main(ByVal args As String())

            ' Create Bytescout.PDFExtractor.CSVExtractor instance
            Dim extractor As New CSVExtractor()
            extractor.RegistrationName = "demo"
            extractor.RegistrationKey = "demo"

            ' Load sample PDF document
            extractor.LoadDocumentFromFile("sample3.pdf")

            ' extractor.CSVSeparatorSymbol = "," // you can change CSV separator symbol

            ' Get page count
            Dim pageCount As Integer = extractor.GetPageCount()

            For i As Integer = 0 To pageCount - 1
                Dim fileName As String = "page" & i & ".csv"

                ' Save extracted page text to file
                extractor.SavePageCSVToFile(i, fileName)
            Next

            ' Cleanup
            extractor.Dispose()

            Console.WriteLine()
            Console.WriteLine("Press any key to continue and open CSV in default CSV v")
            Console.ReadKey()

            ' Open result file in default associated application (for demo purposes)
            Process.Start("page0.csv")

        End Sub

    End Class

End Namespace
```
