How to convert PDF to JSON in VB.NET and ByteScout PDF Extractor SDK

Tutorial on how to convert PDF to JSON in VB.NET

On this page you will learn from code samples for programming in VB.NET.Writing of the code to convert PDF to JSON in VB.NET can be done by developers of any level using ByteScout PDF Extractor SDK. ByteScout PDF Extractor SDK can convert PDF to JSON. It can be used from VB.NET. ByteScout PDF Extractor SDK is the Software Development Kit (SDK) that is designed to help developers with data extraction from unstructured documents like pdf, tiff, scans, images, scanned and electronic forms. The library is powered by OCR, computer vision and AI to provide unique functionality like table detection, automatic table structure extraction, data restoration, data restructuring and reconstruction. Supports PDF, TIFF, PNG, JPG images as input and can output CSV, XML, JSON formatted data. Includes full set of utilities like pdf splitter, pdf merger, searchable pdf maker.

This rich sample source code in VB.NET for ByteScout PDF Extractor SDK includes the number of functions and options you should do calling the API to convert PDF to JSON. In order to implement the functionality, you should copy and paste this code for VB.NET below into your code editor with your app, compile and run your application. Enjoy writing a code with ready-to-use sample codes in VB.NET.

Trial version of ByteScout PDF Extractor SDK is available for free. Source code samples are included to help you with your VB.NET app.

Source Code Files:

Module1.vb

```vbnet
Imports System
Imports System.Collections.Generic
Imports System.Text
Imports Bytescout.PDFExtractor
Imports System.Diagnostics

Namespace ConsoleApplication1

    Class Program

        Shared Sub Main(ByVal args As String())

            ' Create Bytescout.PDFExtractor.JSONExtractor instance
            Dim extractor As New JSONExtractor()
            extractor.RegistrationName = "demo"
            extractor.RegistrationKey = "demo"

            ' Load sample PDF document
            extractor.LoadDocumentFromFile("sample3.pdf")

            extractor.SaveJSONToFile("output.json")

            ' Cleanup
                extractor.Dispose()

            Console.WriteLine()
            Console.WriteLine("Data has been extracted to 'output.json' file.")
            Console.WriteLine()
            Console.WriteLine("Press any key to continue and open JSON file in default
            Console.ReadKey()

            ' Open result file in default associated application (for demo purposes)
            Process.Start("output.json")

        End Sub

    End Class

End Namespace
```
