

How to convert PDF to XML in VB.NET and ByteScout PDF Extractor SDK

The tutorial below will demonstrate how to convert PDF to XML in VB.NET

These sample source codes on this page below are demonstrating how to convert PDF to XML in VB.NET. ByteScout PDF Extractor SDK is the SDK is designed to help developers with pdf tables and pdf data extraction from unstructured documents like pdf, tiff, scans, images, scanned and electronic forms. The library is powered by OCR, computer vision and AI to provide unique functionality like table detection, automatic table structure extraction, data restoration, data restructuring and reconstruction. Supports PDF, TIFF, PNG, JPG images as input and can output CSV, XML, JSON formatted data. Includes full set of utilities like pdf splitter, pdf merger, searchable pdf maker and other utilities. It can be used to convert PDF to XML using VB.NET.

Fast application programming interfaces of ByteScout PDF Extractor SDK for VB.NET plus the instruction and the code below will help you quickly learn how to convert PDF to XML. This VB.NET sample code is all you need for your app. Just copy and paste the code, add references (if needs to) and you are all set! Test VB.NET sample code examples whether they respond your needs and requirements for the project.

Free trial version of ByteScout PDF Extractor SDK is available on our website. Documentation and source code samples are included.

Source Code Files:

Module1.vb

```
Imports System
Imports Bytescout.PDFExtractor

Namespace PDF2XML

    Class Program

        Shared Sub Main(ByVal args As String())

            ' Create Bytescout.PDFExtractor.XMLExtractor instance
            Dim extractor As New XMLExtractor()
            extractor.RegistrationName = "demo"
            extractor.RegistrationKey = "demo"

            ' Load sample PDF document
            extractor.LoadDocumentFromFile("sample3.pdf")

            extractor.SaveXMLToFile("output.XML")

            ' Cleanup
            extractor.Dispose()

            Console.WriteLine()
            Console.WriteLine("Data has been extracted to 'output.XML' file.")
            Console.WriteLine()
            Console.WriteLine("Press any key...")
            Console.ReadKey()

        End Sub

    End Class

End Namespace
