

How to find text with hyphens in PDF in VB.NET with ByteScout PDF Extractor SDK

The tutorial below will demonstrate how to find text with hyphens in PDF in VB.NET

The code below will help you to implement an VB.NET app to find text with hyphens in PDF. ByteScout PDF Extractor SDK is the SDK is designed to help developers with pdf tables and pdf data extraction from unstructured documents like pdf, tiff, scans, images, scanned and electronic forms. The library is powered by OCR, computer vision and AI to provide unique functionality like table detection, automatic table structure extraction, data restoration, data restructuring and reconstruction. Supports PDF, TIFF, PNG, JPG images as input and can output CSV, XML, JSON formatted data. Includes full set of utilities like pdf splitter, pdf merger, searchable pdf maker and other utilities and you can use it to find text with hyphens in PDF with VB.NET.

This rich sample source code in VB.NET for ByteScout PDF Extractor SDK includes the number of functions and options you should do calling the API to find text with hyphens in PDF. Follow the instructions from the scratch to work and copy the VB.NET code. Use of ByteScout PDF Extractor SDK in VB.NET is also explained in the documentation included along with the product.

Trial version of ByteScout PDF Extractor SDK is available for free. Source code samples are included to help you with your VB.NET app.

Source Code Files:

Program.vb

```
Imports System.Drawing
Imports Bytescout.PDFExtractor

Class Program
    Friend Shared Sub Main(args As String())

        ' Create Bytescout.PDFExtractor.TextExtractor instance
        Dim extractor As New TextExtractor()
        extractor.RegistrationName = "demo"
        extractor.RegistrationKey = "demo"

        ' Load sample PDF document
        extractor.LoadDocumentFromFile("words-with-hyphens.pdf")

        Dim pageCount As Integer = extractor.GetPageCount()

        ' Search each page for "hyphen" string
        For i As Integer = 0 To pageCount - 1
            If extractor.Find(i, "hyphen", False) Then
                Do
                    Console.WriteLine("Found on page " & i.ToString)
                    Loop While extractor.FindNext()
                End If
            End If
        Next

        ' Cleanup
        extractor.Dispose()

        Console.WriteLine()
        Console.WriteLine("Press any key to continue...")
        Console.ReadLine()

    End Sub
End Class
