How to read hindi text in VB.NET and ByteScout PDF Extractor SDK

Tutorial on how to read hindi text in VB.NET

These source code samples are listed and grouped by their programming language and functions they use. What is ByteScout PDF Extractor SDK? It is the Software Development Kit (SDK) that is designed to help developers with data extraction from unstructured documents like pdf, tiff, scans, images, scanned and electronic forms. The library is powered by OCR, computer vision and AI to provide unique functionality like table detection, automatic table structure extraction, data restoration, data restructuring and reconstruction. Supports PDF, TIFF, PNG, JPG images as input and can output CSV, XML, JSON formatted data. Includes full set of utilities like pdf splitter, pdf merger, searchable pdf maker. It can help you to read hindi text in your VB.NET application.

Fast application programming interfaces of ByteScout PDF Extractor SDK for VB.NET plus the instruction and the code below will help you quickly learn how to read hindi text. In order to implement the functionality, you should copy and paste this code for VB.NET below into your code editor with your app, compile and run your application. Test VB.NET sample code examples whether they respond your needs and requirements for the project.

Free trial version of ByteScout PDF Extractor SDK is available on our website. Documentation and source code samples are included.

Source Code Files:

Program.vb

```vb
Imports System.Text
Imports Bytescout.PDFExtractor

Module Program

    Sub Main()

        Try

            ' Files
            Dim fileName As String = "hindiText.pdf"
            Dim destFileName As String = "extractedText.txt"

            ' Read all text from pdf file
            Dim extractor As TextExtractor = New TextExtractor

            ' Load PDF document
            extractor.LoadDocumentFromFile(fileName)

            ' Option 1: Extract all text and write to destination file
            extractor.SaveTextToFile(destFileName, encoding := Encoding.Unicode)

            Console.WriteLine("All extracted text (hindi) written successfully to dest

            Process.Start(destFileName)

            ' Option 2: Read all text to string variable
            'Dim allText As String = extractor.GetText

            ' Cleanup
            extractor.Dispose()

        Catch ex As Exception
            Console.WriteLine(ex.Message)
        End Try

        Console.WriteLine()
        Console.WriteLine("Press any key to continue...")
        Console.ReadLine()

    End Sub

End Module
