## How to split protected PDF document in VB.NET with ByteScout PDF Extractor SDK

The tutorial below will demonstrate how to split protected PDF document in VB.NET

Split protected PDF document is easy to implement in VB.NET if you use these source codes below. ByteScout PDF Extractor SDK is the SDK that helps developers to extract data from unstructured documents, pdf, images, scanned and electronic forms. Includes AI functions like automatic table detection, automatic table extraction and restructuring, text recognition and text restoration from pdf and scanned documents. Includes PDF to CSV, PDF to XML, PDF to JSON, PDF to searchable PDF functions as well as methods for low level data extraction. It can be used to split protected PDF document using VB.NET.

This code snippet below for ByteScout PDF Extractor SDK works best when you need to quickly split protected PDF document in your VB.NET application. In your VB.NET project or application you may simply copy & paste the code and then run your app! Test VB.NET sample code examples whether they respond your needs and requirements for the project.

You can download free trial version of ByteScout PDF Extractor SDK from our website to see and try many others source code samples for VB.NET.

Source Code Files:

```
Imports Bytescout.PDFExtractor
Class Program
   Friend Shared Sub Main(args As String())
       Dim inputFile As String = "encrypted (password is 'password').pdf"
       Using splitter As New DocumentSplitter("demo", "demo")
            ' Handle `PasswordRequired` event
            AddHandler splitter.PasswordRequired, New PasswordEventHandler(AddressOf splitter)
            ' Ignore document permissions
            splitter.CheckPermissions = False
            ' Split document
            splitter.Split(inputFile, "part1.pdf", "part2.pdf", 3)
        End Using
       Console.WriteLine()
        Console.WriteLine("Press any key...")
       Console.ReadKey()
   End Sub
   Private Shared Sub splitter_PasswordRequired(sender As Object, document As String,
        ' Ask user for password And put it to `Password` property.
       password = "password"
   End Sub
End Class
```
