

How to extract images coordinates from PDF in VBScript and ByteScout PDF Extractor SDK

This tutorial will show how to extract images coordinates from PDF in VBScript

The documentation is designed to help you to implement the features on your side. Want to extract images coordinates from PDF in your VBScript app? ByteScout PDF Extractor SDK is designed for it. ByteScout PDF Extractor SDK is the SDK is designed to help developers with pdf tables and pdf data extraction from unstructured documents like pdf, tiff, scans, images, scanned and electronic forms. The library is powered by OCR, computer vision and AI to provide unique functionality like table detection, automatic table structure extraction, data restoration, data restructuring and reconstruction. Supports PDF, TIFF, PNG, JPG images as input and can output CSV, XML, JSON formatted data. Includes full set of utilities like pdf splitter, pdf merger, searchable pdf maker and other utilities.

VBScript code samples for VBScript developers help to speed up coding of your application when using ByteScout PDF Extractor SDK. Follow the instructions from the scratch to work and copy the VBScript code. Further enhancement of the code will make it more vigorous.

Trial version of ByteScout PDF Extractor SDK is available for free. Source code samples are included to help you with your VBScript app.

Source Code Files:

ExtractImageCoordinatesFromAllImages.vbs

```
' Create Bytescout.PDFExtractor.ImageExtractor object
Set extractor = CreateObject("Bytescout.PDFExtractor.ImageExtractor")
extractor.RegistrationName = "demo"
extractor.RegistrationKey = "demo"

' Load sample PDF document
extractor.LoadDocumentFromFile("../..\sample1.pdf")

i = 0

' Initialize image enumeration
If extractor.GetFirstImage() Then
    Do
        ' display coordinates of the image
        MsgBox "Image #" & CStr(i) & vbCRLF & "Coordinates: " & CStr( extractor.GetCurrentImageRectangle_Left()) & ", " & CStr( extractor.GetCurrentImageRectangle_Top()) & ", " & CStr( extractor.GetCurrentImageRectangle_Width()) & ", " & CStr( extractor.GetCurrentImageRectangle_Height())
        i = i + 1
    Loop While extractor.GetNextImage() ' Advance image enumeration
End If

Set extractor = Nothing
```
