How to extract text by pages from PDF in VBScript and ByteScout PDF Extractor SDK

Write code in VBScript to extract text by pages from PDF with this step-by-step tutorial

The coding tutorials are designed to help you test the features without need to write your own code. ByteScout PDF Extractor SDK is the SDK that helps developers to extract data from unstructured documents, pdf, images, scanned and electronic forms. Includes AI functions like automatic table detection, automatic table extraction and restructuring, text recognition and text restoration from pdf and scanned documents. Includes PDF to CSV, PDF to XML, PDF to JSON, PDF to searchable PDF functions as well as methods for low level data extraction. It can be used to extract text by pages from PDF using VBScript.

VBScript code samples for VBScript developers help to speed up coding of your application when using ByteScout PDF Extractor SDK. This VBScript sample code is all you need for your app. Just copy and paste the code, add references (if needs to) and you are all set! Code testing will allow the function to be tested and work properly with your data.

Download free trial version of ByteScout PDF Extractor SDK from our website with this and other source code samples for VBScript.

Source Code Files:

ExtractTextByPages.vbs

```vbs
' Create Bytescout.PDFExtractor.TextExtractor object
Set extractor = CreateObject("Bytescout.PDFExtractor.TextExtractor")
extractor.RegistrationName = "demo"
extractor.RegistrationKey = "demo"

' Load sample PDF document
extractor.LoadDocumentFromFile("..\..\sample2.pdf")

' Get page count
pageCount = extractor.GetPageCount()

For i = 0 To pageCount - 1
        fileName = "page" & i & ".txt"

        ' Save extracted page text to file
        extractor.SavePageTextToFile i, fileName
Next

' Open first output file in default associated application
Set shell = CreateObject("WScript.Shell")
shell.Run "page0.txt", 1, false
Set shell = Nothing

Set extractor = Nothing
```
