

How to create zugferd invoice in VB.NET with ByteScout PDF SDK

This tutorial will show how to create zugferd invoice in VB.NET

The code below will help you to implement an VB.NET app to create zugferd invoice. What is ByteScout PDF SDK? It is the component to help programmers in generating new pdf files, modifying and updating existing pdf documents or pdf forms. Provides support for auto-filling pdf forms, adding text with adjustable font, style, size, font family, new form fields, vector and raster drawings. It can help you to create zugferd invoice in your VB.NET application.

This code snippet below for ByteScout PDF SDK works best when you need to quickly create zugferd invoice in your VB.NET application. Just copy and paste the code into your VB.NET application's code and follow the instruction. Further enhancement of the code will make it more vigorous.

Trial version of ByteScout PDF SDK is available for free. Source code samples are included to help you with your VB.NET app.

VB.NET - Program.vb

```
Imports Bytescout.PDF

'''

''' This example demonstrates how to attach a file to PDF document.
'''

Class Program

    Shared Sub Main()

        ' Create new PDF document
        Dim pdfDocument = New Document()
            pdfDocument.RegistrationName = "demo"
            pdfDocument.RegistrationKey = "demo"

        ' Load existing document
        pdfDocument.Load(".\Invoice.pdf")

        ' Attach ZUGFeRD XML file
        Dim fileAttachment As New Bytescout.PDF.FileAttachmentAnnotation(".\ZUGFeRD-
invoice.xml", 0, 0, 0, 0)
        pdfDocument.Pages.Item(0).Annotations.Add(fileAttachment)

        ' Instruct PDF viewer applications to show attachment page on startup
        pdfDocument.PageMode = PageMode.Attachment
    End Sub
End Class
```

```
' Save document to file
pdfDocument.Save("result.pdf")

' Cleanup
pdfDocument.Dispose()

' Open result document in default associated application (for demo puropse)
Dim processStartInfo As New ProcessStartInfo("result.pdf")
processStartInfo.UseShellExecute = True
Process.Start(processStartInfo)

End Sub

End Class
```
