

# How to load existing PDF document in VBScript and VB6 using ByteScout PDF SDK

How to code in VBScript and VB6 to load existing PDF document with this step-by-step tutorial

The sample source code below will teach you how to load existing PDF document in VBScript and VB6. ByteScout PDF SDK: the library for pdf documents generation, modification and updates. Can also generate and fill PDF forms. Provides support for text (fonts, style, size, font family), layers, pdf form fields, vector and raster drawings. It can load existing PDF document in VBScript and VB6.

This code snippet below for ByteScout PDF SDK works best when you need to quickly load existing PDF document in your VBScript and VB6 application. This VBScript and VB6 sample code is all you need for your app. Just copy and paste the code, add references (if needs to) and you are all set! Implementing VBScript and VB6 application typically includes multiple stages of the software development so even if the functionality works please test it with your data and the production environment.

Trial version of ByteScout PDF SDK is available for free. Source code samples are included to help you with your VBScript and VB6 app.

VBScript and VB6 - LoadDocument.vbs

```
' This example demonstrates how to load and modify an existing document.

' Create Bytescout.PDF.Document object
Set pdfDocument = CreateObject("Bytescout.PDF.Document")
pdfDocument.RegistrationName = "demo"
pdfDocument.RegistrationKey = "demo"

Set comHelpers = pdfDocument.ComHelpers

' Load existing document
pdfDocument.Load("sample.pdf")

' Add new page to loaded document
Set newPage = comHelpers.CreatePage(comHelpers.PAPERFORMAT_A4)
Set timesFont = comHelpers.CreateStandardFont(comHelpers.STANDARDFONTS_TIMES, 24)
Set blackBrush = comHelpers.CreateSolidBrush(comHelpers.CreateColorGray(0))
newPage.Canvas.DrawString "New Page", (timesFont), (blackBrush), 20, 20
pdfDocument.Pages.Add(newPage)

' Save document to file
pdfDocument.Save("result.pdf")

' Open document in default PDF viewer app
```

```
Set shell = CreateObject("WScript.Shell")
shell.Run "result.pdf", 1, false
```
