How to extract table structure from pdf with pdf extractor sdk in VB.NET with ByteScout PDF Suite

If you want to learn more then this tutorial will show how to extract table structure from pdf with pdf extractor sdk in VB.NET

The coding instructions are formulated to help you to try-out the features without the requirement to write your own code. What is ByteScout PDF Suite? It is the bundle that provides six different SDK libraries to work with PDF from generating rich PDF reports to extracting data from PDF documents and converting them to HTML. This bundle includes PDF (Generator) SDK, PDF Renderer SDK, PDF Extractor SDK, PDF to HTML SDK, PDF Viewer SDK and PDF Generator SDK for Javascript. It can help you to extract table structure from pdf with pdf extractor sdk in your VB.NET application.

Want to save time? You will save a lot of time on writing and testing code as you may just take the VB.NET code from ByteScout PDF Suite for extract table structure from pdf with pdf extractor sdk below and use it in your application. IF you want to implement the functionality, just copy and paste this code for VB.NET below into your code editor with your app, compile and run your application. Want to see how it works with your data then code testing will allow the function to be tested and work properly.

Our website gives trial version of ByteScout PDF Suite for free. It also includes documentation and source code samples.

Source Code Files:

Program.vb

```vb
Imports Bytescout.PDFExtractor

Class Program
        Friend Shared Sub Main(args As String())

        ' Create Bytescout.PDFExtractor.StructuredExtractor instance
        Dim extractor As New StructuredExtractor()
                extractor.RegistrationName = "demo"
                extractor.RegistrationKey = "demo"

                ' Load sample PDF document
        extractor.LoadDocumentFromFile(".\sample3.pdf")

        For pageIndex As Integer = 0 To extractor.GetPageCount() - 1

            Console.WriteLine("Starting extraction from page #" + pageIndex.ToString())
            Console.WriteLine()

            extractor.PrepareStructure(pageIndex)

            Dim rowCount As Integer = extractor.GetRowCount(pageIndex)

            For row As Integer = 0 To rowCount - 1

                Dim columnCount As Integer = extractor.GetColumnCount(pageIndex, row)

                For col As Integer = 0 To columnCount - 1

                    Console.WriteLine(extractor.GetCellValue(pageIndex, row, col))

                Next
            Next
        Next

        ' Cleanup
                extractor.Dispose()

        Console.WriteLine()
        Console.WriteLine("Press any key to continue...")
        Console.ReadLine()

        End Sub
End Class
```
