

How to find keyword and extract text in PDF with PDF extractor SDK in C# with ByteScout Premium Suite

Learn to code in C# to find keyword and extract text in PDF with PDF extractor SDK with this step-by-step tutorial

We made thousands of pre-made source code pieces for easy implementation in your own programming projects. ByteScout Premium Suite can find keyword and extract text in PDF with PDF extractor SDK. It can be applied from C#. ByteScout Premium Suite is the bundle that includes twelve SDK products from ByteScout including tools and components for PDF, barcodes, spreadsheets, screen video recording.

These C# code samples for C# guide developers to speed up coding of the application when using ByteScout Premium Suite. IF you want to implement the functionality, just copy and paste this code for C# below into your code editor with your app, compile and run your application. Check C# sample code samples to see if they respond to your needs and requirements for the project.

The trial version of ByteScout Premium Suite can be downloaded for free from our website. It also includes source code samples for C# and other programming languages.

Source Code Files:

```
using System;
using System.Drawing;
using Bytescout.PDFExtractor;

namespace FindText
{
    class Program
    {
        static void Main(string[] args)
        {
            // Create Bytescout.PDFExtractor.TextExtractor instance
            TextExtractor extractor = new TextExtractor();
            extractor.RegistrationName = "demo";
            extractor.RegistrationKey = "demo";

            // Load sample PDF document
            extractor.LoadDocumentFromFile(@"..\sample2.pdf");

            int pageCount = extractor.GetPageCount();

            // Search each page for some keyword
            for (int i = 0; i < pageCount; i++)
            {
                if (extractor.Find(i, "References", false))
                {
                    // If page contains the keyword, extract a text
                    // For demonstration we'll extract the text from
                    extractor.SetExtractionArea(0, 0, 600, 200);
                    string text = extractor.GetTextFromPage(i);
                    Console.WriteLine(text);
                }
            }

            // Cleanup
            extractor.Dispose();

            Console.WriteLine();
            Console.WriteLine("Press any key to continue...");
            Console.ReadLine();
        }
    }
}
