How to generate qr code barcode with binary data with barcode sdk in C# using ByteScout Premium Suite

Learn to generate qr code barcode with binary data with barcode sdk in C#

On this page you will learn from code samples for programming in C#.Writing of the code to generate qr code barcode with binary data with barcode sdk in C# can be executed by programmers of any level using ByteScout Premium Suite. What is ByteScout Premium Suite? It is the bundle that includes twelve SDK products from ByteScout including tools and components for PDF, barcodes, spreadsheets, screen video recording. It can help you to generate qr code barcode with binary data with barcode sdk in your C# application.

Want to quickly learn? This fast application programming interfaces of ByteScout Premium Suite for C# plus the guidelines and the code below will help you quickly learn how to generate qr code barcode with binary data with barcode sdk. This C# sample code is all you need for your app. Just copy and paste the code, add references (if needs to) and you are all set! Complete and detailed tutorials and documentation are available along with installed ByteScout Premium Suite if you'd like to learn more about the topic and the details of the API.

You can download free trial version of ByteScout Premium Suite from our website with this and other source code samples for C#.

Source Code Files:

Program.cs

```csharp
using System.Diagnostics;
using System.Text;
using Bytescout.BarCode;

namespace QRCodeWithBinaryData
{
        class Program
        {
                static void Main(string[] args)
                {
                        // Create Barcode component instance
                        using (Barcode barcode = new Barcode())
                        {
                                barcode.RegistrationName = "demo";
                                barcode.RegistrationKey = "demo";

                                // Set barcode type
                                barcode.Symbology = SymbologyType.QRCode;

                                // Sample byte array to use as value
                                byte[] byteArray = new byte[] { 0, 10, 11, 12, 13, 14,

                                // Set value by converting byte array to string
                                barcode.Value = Encoding.ASCII.GetString(byteArray);

                                // Save barcode image
                                barcode.SaveImage("result.png");

                                // Open output image in default associated application
                                Process.Start("result.png");
                        }
                }
        }
}
```
