

## How to rotate image in pdf with pdf generator sdk for javascript in JavaScript and ByteScout Premium Suite

Learn to rotate image in pdf with pdf generator sdk for javascript in JavaScript

On this page you will learn from code samples for programming in JavaScript. Writing of the code to rotate image in pdf with pdf generator sdk for javascript in JavaScript can be executed by programmers of any level using ByteScout Premium Suite. ByteScout Premium Suite is the set that includes 12 SDK products from ByteScout including tools and components for PDF, barcodes, spreadsheets, screen video recording. It can be applied to rotate image in pdf with pdf generator sdk for javascript using JavaScript.

These JavaScript code samples for JavaScript guide developers to speed up coding of the application when using ByteScout Premium Suite. This JavaScript sample code is all you need for your app. Just copy and paste the code, add references (if needs to) and you are all set! Want to see how it works with your data then code testing will allow the function to be tested and work properly.

Trial version of ByteScout Premium Suite is available for free. Source code samples are included to help you with your JavaScript app.

Source Code Files:

## checkdatauri.js

```
// checks if we have datauri support in current browser
// if we have support for datauri support then we can stream generated PDF right
// otherwise we should use Downloadify script to allow user to save PDF file
function CheckDataURISupport(){

var result = true;
var checkDataURISupportImage = new Image();

checkDataURISupportImage.onload = checkDataURISupportImage.onerror = function()
    if(this.width != 1 || this.height != 1){
        result = false;
    }
}
checkDataURISupportImage.src = "";
// check if we have datauri support in current browser - end

    return result;
}
```

## createpdf.js

```
// function that creates BytescoutPDF instance (defined in BytescoutPDF.js script which
// then calls API methods and properties to create PDF document
// and returns created BytescoutPDF object instance
// this CreatePDF() function is called from Sample.html
// IsInternetExplorer8OrLower parameter indicates if we use IE8 or lower so we CAN'T use

// IMPORTANT ABOUT IMAGES:
// When using Firefox or IE, pdf generation may fail because images are not accessible
// the solution for this issue is to preload images in main HTML document before running
// to preload images, put them into hidden div block "pdfreportimages" - you can see it

function CreatePDF(IsInternetExplorer8OrLower) {

    // create BytescoutPDF object instance
    var pdf = new BytescoutPDF();

    // set document properties: Title, subject, keywords, author name and creator name
    pdf.propertiesSet("Sample document title", "Sample subject", "keyword1, keyword 2",
        pdf.pageAdd();

    // we can use images only if we are on IE9 or higher (or non-IE browser)
```

```
if (!IsInternetExplorer8OrLower)
{
    // load image from local file
    pdf.imageLoadFromUrl('image1.jpg');
    // place this mage at given X, Y coordinates on the page and rotate -30 degree
    pdf.imagePlace(200, 40, -30);

    // load image from local file
    pdf.imageLoadFromUrl('image2.jpg');
    // placeimage at given X, Y coordinate and rotate 30 degree
    pdf.imagePlace(200, 420, 30);
}

// return BytescoutPDF object instance
return pdf;
}
```
