

file processing using profiles with pdf extractor sdk in VB.NET and ByteScout Premium Suite

Learn to code in VB.NET to make file processing using profiles with pdf extractor sdk with this simple How-To tutorial

This page explains the steps and algorithm of implementing file processing using profiles with pdf extractor sdk and how to make it work in your application. ByteScout Premium Suite was made to help with file processing using profiles with pdf extractor sdk in VB.NET. ByteScout Premium Suite is the bundle that includes twelve SDK products from ByteScout including tools and components for PDF, barcodes, spreadsheets, screen video recording.

This rich and prolific sample source code in VB.NET for ByteScout Premium Suite contains various functions and options you should do calling the API to implement file processing using profiles with pdf extractor sdk. If you want to implement this functionality, you should copy and paste code below into your app using code editor. Then compile and run your application. Enjoy writing a code with ready-to-use sample VB.NET codes to add file processing using profiles with pdf extractor sdk functions using ByteScout Premium Suite in VB.NET.

Trial version can be downloaded from our website for free. It contains this and other source code samples for VB.NET.

Source Code Files:

Program.vb

```
Imports Bytescout.PDFExtractor
```

```
' This example demonstrates the use of profiles. Profiles are set of properties  
' allowing to apply them to Extractor in any combination quickly. You can use  
' predefined profiles or create you own in JSON format like in this example.
```

```
Class Program
```

```
    Friend Shared Sub Main(args As String())
```

```
        ' Create Bytescout.PDFExtractor.TextExtractor instance  
        Dim extractor As New TextExtractor()  
        extractor.RegistrationName = "demo"  
        extractor.RegistrationKey = "demo"  
        extractor.OCRLanguageDataFolder = "c:\Program Files\Bytescout PDF Extractor SDI"
```

```
        ' Load sample PDF document  
        extractor.LoadDocumentFromFile("sample_ocr.pdf")
```

```
        ' Apply predefined profiles  
        extractor.Profiles = "ocr, newspaper-layout"  
        ' Extract text to file  
        extractor.SaveTextToFile("result1.txt")
```

```
        extractor.Reset()
```

```
        ' Load another document  
        extractor.LoadDocumentFromFile("sample_ocr.pdf")
```

```
        ' Load and apply custom profiles  
        extractor.LoadProfiles("profiles.json")  
        extractor.Profiles = "keep-formatting, ocr-forced-200dpi"  
        ' Extract text to file  
        extractor.SaveTextToFile("result2.txt")
```

```
        ' Cleanup  
        extractor.Dispose()
```

```
        ' See result files in "bin\Debug" folder
```

```
    End Sub
```

```
End Class
```
