Source Code Files:

```
Imports System.Drawing
Imports Bytescout.PDFExtractor

Namespace FindText

    Class Program

        Friend Shared Sub Main(args As String())

            ' Create Bytescout.PDFExtractor.TextExtractor instance
            Dim extractor As New TextExtractor()
            extractor.RegistrationName = "demo"
            extractor.RegistrationKey = "demo"

            ' Load sample PDF document
            extractor.LoadDocumentFromFile(".\sample2.pdf")

            Dim pageCount As Integer = extractor.GetPageCount()

            ' Search each page for some keyword
            For i As Integer = 0 To pageCount - 1
                If extractor.Find(i, "References", False) Then
                    ' If page contains the keyword, extract a text
                    ' For demonstration we'll extract the text from
                    extractor.SetExtractionArea(0, 0, 600, 200)
                    Dim text As String = extractor.GetTextFromPage(i)
                    Console.WriteLine(text)
                End If
            Next

            ' Cleanup
            extractor.Dispose()

            Console.WriteLine()
            Console.WriteLine("Press any key to continue...")
            Console.ReadLine()

        End Sub

    End Class

End Namespace
