How to capture video from screen with webcamera overlay in C++ (unmanaged) with ByteScout Screen Capturing SDK

The tutorial below will demonstrate how to capture video from screen with webcamera overlay in C++ (unmanaged)

Capture video from screen with webcamera overlay is easy to implement in C++ (unmanaged) if you use these source codes below. ByteScout Screen Capturing SDK is the tool for developers who want to add screen capturing in their application. Can record screen into video and into single screenshots. Output formats are WMV, AVI, WebM for video and PNG for screenshots. You can adjust output video size, quality, resolution, framerate, video and audio codecs. Includes special privacy features for blacking out sensitive information on screen. Can also capture video from web camera, can add overlays with text or images. It can be used to capture video from screen with webcamera overlay using C++ (unmanaged).

You will save a lot of time on writing and testing code as you may just take the C++ (unmanaged) code from ByteScout Screen Capturing SDK for capture video from screen with webcamera overlay below and use it in your application. This C++ (unmanaged) sample code is all you need for your app. Just copy and paste the code, add references (if needs to) and you are all set! This basic programming language sample code for C++ (unmanaged) will do the whole work for you to capture video from screen with webcamera overlay.

Our website provides trial version of ByteScout Screen Capturing SDK for free. It also includes documentation and source code samples.

Source Code Files:

CaptureWithWebcameraOverlay.cpp

```
// CaptureFromEntireScreen.cpp : Defines the entry point for the console application.
//

#include "stdafx.h"
#import "BytescoutScreenCapturing.dll"

using namespace BytescoutScreenCapturingLib;
using namespace std;

void usage(ICapturer* capturer);
void setParams(int argc, _TCHAR* argv[], ICapturer* capturer);

int _tmain(int argc, _TCHAR* argv[])
{
	::CoInitialize(0);

	// Create Capturer instance

	CLSID clsid_ScreenCapturer;
	CLSIDFromProgID(OLESTR("BytescoutScreenCapturing.Capturer"), &clsid_ScreenCaptu

	ICapturer* capturer = NULL;
	::CoCreateInstance(clsid_ScreenCapturer, NULL, CLSCTX_ALL, __uuidof(ICapturer)

	if (!capturer)
	{
		_ftprintf(stdout, _T("Screen Capturer is not installed properly."));
		::CoUninitialize();
		return 1;
	}

	capturer->put_RegistrationName(_T("demo"));
	capturer->put_RegistrationKey(_T("demo"));

	// Set capturing type
	capturer->put_CapturingType(catScreen);

	// uncomment to enable recording of semitransparent or layered windows (Warning
	// capturer->CaptureTransparentControls = true;

	// Set webcamera device by name (put_CurrentWebCamName() method)
	// or set it by index using put_CurrentWebCam()
	capturer->put_CurrentWebCam(0);

	// Set rectangle to show overlaying video from webcam into the rectangle 160x12
    capturer->SetWebCamVideoRectangle(10, 10, 160, 120);

	// Enable webcam overlaying capture device
	capturer->put_AddWebCamVideo(VARIANT_TRUE);
```

```
        // Set output video width and height
        capturer->put_OutputWidth(640);
        capturer->put_OutputHeight(480);

            // WMV and WEBM output use WMVVideoBitrate property to control output vide
            // so try to increase it by x2 or x3 times if you think the output video a
            // capturer->put_WMVVideoBitrate(capturer->WMVVideoBitrate * 2);

        // Set output file name
        capturer->OutputFileName = _T("Output.wmv");

        // Start capturing
        HRESULT hr = capturer->Run();

        // IMPORTANT: if you want to check for some code if need to stop the recording
        // using Thread.Sleep(1) inside the checking loop, so you have the loop like
        // Do
        // Thread.Sleep(1)
        // While StopButtonNotClicked

        if (FAILED(hr))
        {
                // Error handling
                CComBSTR s;
                capturer->get_LastError(&s);
                _ftprintf(stdout, _T("Capture failed: %s\n"), CString(s));
        }
        else
        {
                _tprintf(_T("Starting capture - Hit a key to stop ...\n"));

                int i = 0;
                TCHAR *spin = _T("|/-\\");

                // Show some progress
                while (!_kbhit())
                {
                        _tprintf(_T("\rEncoding %c"), spin[i++]);
                        i %= 4;
                        Sleep(50);
                }

                // Stop after key press
                capturer->Stop();

                _tprintf(_T("\nDone."));
                getchar();
        }

        // Release Capturer
        capturer->Release();
        capturer = NULL;

        ::CoUninitialize();

        return 0;
}
```

stdafx.cpp

```
// stdafx.cpp : source file that includes just the standard includes
// CaptureFromEntireScreen.pch will be the pre-compiled header
// stdafx.obj will contain the pre-compiled type information

#include "stdafx.h"

// TODO: reference any additional headers you need in STDAFX.H
// and not in this file
```

stdafx.h

```
// stdafx.h : include file for standard system include files,
// or project specific include files that are used frequently, but
// are changed infrequently
//

#pragma once
