How to set options in Registry with ByteScout Screen Capturing SDK

How to set options in Registry

The documentation is designed to help you to implement the features on your side. ByteScout Screen Capturing SDK can set options. It can be used from Registry. ByteScout Screen Capturing SDK is the screen video recording SDK helps in quick implementation of screen video recording. WMV, AVI, WebM output options are available with adjustable quality, video size, framerate and video and audio codec. Includes special features like live multiple blacking out of selected areas, recording from web cam as main source and as overlay, optional watermarks for output video.

This code snippet below for ByteScout Screen Capturing SDK works best when you need to quickly set options in your Registry application. In order to implement the functionality, you should copy and paste this code for Registry below into your code editor with your app, compile and run your application. Test Registry sample code examples whether they respond your needs and requirements for the project.

ByteScout free trial version is available for download from our website. It includes all these programming tutorials along with source code samples.
