

How to capture video from silverlight control in browser in VBScript and VB6 with ByteScout Screen Capturing SDK

Write code in VBScript and VB6 to capture video from silverlight control in browser with this step-by-step tutorial

ByteScout tutorials are designed to explain the code for both VBScript and VB6 beginners and advanced programmers. ByteScout Screen Capturing SDK can capture video from silverlight control in browser. It can be used from VBScript and VB6. ByteScout Screen Capturing SDK is the screen video recording SDK helps in quick implementation of screen video recording. WMV, AVI, WebM output options are available with adjustable quality, video size, framerate and video and audio codec. Includes special features like live multiple blacking out of selected areas, recording from web cam as main source and as overlay, optional watermarks for output video.

This code snippet below for ByteScout Screen Capturing SDK works best when you need to quickly capture video from silverlight control in browser in your VBScript and VB6 application. In order to implement the functionality, you should copy and paste this code for VBScript and VB6 below into your code editor with your app, compile and run your application. Implementing VBScript and VB6 application typically includes multiple stages of the software development so even if the functionality works please test it with your data and the production environment.

ByteScout free trial version is available for download from our website. It includes all these programming tutorials along with source code samples.

Source Code Files:

CaptureGivenWindow-control.vbs

```
' create video capturer activex object
Set capturer = CreateObject("BytescoutScreenCapturing.Capturer")

' set output video file name (WMV), you can also set to AVI
capturer.OutputFileName = "GivenWindowCaptured-SilverlightControl.avi"

' set capturing type to the caWindow =1 to capture the given window
capturer.CapturingType = 1

MsgBox "This script will record video from Silverlight control in Internet Explorer for

capturer.SetLogFile "log-control.txt"

' set window class to capture to MicrosoftSilverlight so this will record from silverl
capturer.WindowClassToCapture = "MicrosoftSilverlight"

' uncomment to enable recording of semitransparent or layered windows (Warning: may ca
' capturer.CaptureTransparentControls = true

' set width of the output video
capturer.OutputWidth = 640
' set height of the output video
capturer.OutputHeight = 480

' uncomment to set another output video compression method, Bytescout Lossless, DivX or
' you can use lossless video format, Bytescout Lossless Video Codec
' capturer.CurrentVideoCodecName = "Bytescout Lossless"

' run video capturing
capturer.Run()

' IMPORTANT: if you want to check for some code if need to stop the recording then make
' using Thread.Sleep(1) inside the checking loop, so you have the loop like
' Do
' Thread.Sleep(1)
' While StopButtonNotClicked

' wait for 15 seconds (15000 msec)
WScript.Sleep(15000)

' stop capturing
capturer.Stop()

' destroy Capturer object so the video will be saved into the disk
Set capturer = Nothing

MsgBox "Done"
```
