

How to merge AVI video files in VBScript and VB6 using ByteScout Screen Capturing SDK

If you want to learn more then this tutorial will show how to merge AVI video files in VBScript and VB6

ByteScout simple and easy to understand tutorials are planned to describe the code for both VBScript and VB6 beginners and advanced programmers. ByteScout Screen Capturing SDK is the SDK for developers for quick implementation of screen video recording. The SDK records screen into video or into a series of screenshots. Can also record audio. Saves video into AVI, WMV and Google's WebM. Output video quality, size, resolution or framerate can be adjusted easily. Provides additional tools for privacy features like blacking out on screen areas with sensitive information on screen right during recording. Supports web camera as input and can add instant text and images into video output. It can be applied to merge AVI video files using VBScript and VB6.

Want to save time? You will save a lot of time on writing and testing code as you may just take the VBScript and VB6 code from ByteScout Screen Capturing SDK for merge AVI video files below and use it in your application. This VBScript and VB6 sample code is all you need for your app. Just copy and paste the code, add references (if needs to) and you are all set! If you want to use these VBScript and VB6 sample examples in one or many applications then they can be used easily.

All these programming tutorials along with source code samples and ByteScout free trial version are available for download from our website.

Source Code Files:

MergeAVIVideoFiles.vbs

```
' create video captureractivex object
Set capturer = CreateObject("BytescoutScreenCapturing.Capturer")

' Merge AVI files that were previously created by the ByteScout Screen Capturer (must be of same size, FPS and type)
capturer.JoinAVIFiles "Sample1.avi", "Sample2.avi", "output.avi"

MsgBox "Files merged successfully!"

' destroy Capturer object so the video will be saved into the disk
Set capturer = Nothing
```
