

## How to set blackout for sensitive info in screen video in VBScript and VB6 using ByteScout Screen Capturing SDK

The tutorial below will demonstrate how to set blackout for sensitive info in screen video in VBScript and VB6

Source code documentation samples provide quick and easy way to add a required functionality into your application. ByteScout Screen Capturing SDK is the screen video recording SDK helps in quick implementation of screen video recording. WMV, AVI, WebM output options are available with adjustable quality, video size, framerate and video and audio codec. Includes special features like live multiple blacking out of selected areas, recording from web cam as main source and as overlay, optional watermarks for output video and you can use it to set blackout for sensitive info in screen video with VBScript and VB6.

This code snippet below for ByteScout Screen Capturing SDK works best when you need to quickly set blackout for sensitive info in screen video in your VBScript and VB6 application. This VBScript and VB6 sample code is all you need for your app. Just copy and paste the code, add references (if needs to) and you are all set! Use of ByteScout Screen Capturing SDK in VBScript and VB6 is also explained in the documentation included along with the product.

ByteScout Screen Capturing SDK free trial version is available on our website. VBScript and VB6 and other programming languages are supported.

Source Code Files:

## RecordScreenAndBlackoutSensitiveInfo.vbs

```
' create video capturer activex object
Set capturer = CreateObject("BytescoutScreenCapturing.Capturer")

' set output video file name to .WMV or .AVI file
capturer.OutputFileName = "output.wmv"

' set capturing type to the caScreen =3 to capture the entire screen
capturer.CapturingType = 3

' output video width
capturer.OutputWidth = 640

' output video height
capturer.OutputHeight = 480

' set border type to show around captured area
capturer.CaptureAreaBorderType = 2 ' CaptureAreaBorderType.cabtDashed;

' uncomment to enable recording of semitransparent or layered windows (Warning: may cause lag)
' capturer.CaptureTransparentControls = true

MsgBox "This script will record entire screen for 5 seconds. From 1st to 5 seconds some areas will be blacked out."

' run video capturing
capturer.Run()

' IMPORTANT: if you want to check for some code if need to stop the recording then make a loop
' using Thread.Sleep(1) inside the checking loop, so you have the loop like
' Do
' Thread.Sleep(1)
' While StopButtonNotClicked

' wait for 1 second (1000 msec)
WScript.Sleep(1000)

capturer.BlackoutAddArea 20,100,500,80
capturer.BlackoutAddArea 10,200,550,80
capturer.BlackoutAddArea 20,400,550,120

' record for 5 seconds more
WScript.Sleep(5000)

' reset all blackouts
capturer.BlackoutReset

' record 1 second more
WScript.Sleep(1000)

' stop capturing
capturer.Stop()
```

```
' destroy Capturer object so the video will be saved into the disk  
Set capturer = Nothing
```
