

How to set mouse spot size for screen video in VBScript and VB6 using ByteScout Screen Capturing SDK

This tutorial will show how to set mouse spot size for screen video in VBScript and VB6

These sample source codes on this page below are demonstrating how to set mouse spot size for screen video in VBScript and VB6. Want to set mouse spot size for screen video in your VBScript and VB6 app? ByteScout Screen Capturing SDK is designed for it. ByteScout Screen Capturing SDK is the SDK for developers for quick implementation of screen video recording. The SDK records screen into video or into a series of screenshots. Can also record audio. Saves video into AVI,WMV and Google's WebM. Output video quality, size, resolution or framerate can be adjusted easily. Provides additional tools for privacy features like blacking out on screen areas with sensitive information on screen right during recording. Supports web camera as input and can add instant text and images into video output.

This code snippet below for ByteScout Screen Capturing SDK works best when you need to quickly set mouse spot size for screen video in your VBScript and VB6 application. In your VBScript and VB6 project or application you may simply copy & paste the code and then run your app! This basic programming language sample code for VBScript and VB6 will do the whole work for you to set mouse spot size for screen video.

ByteScout free trial version is available for download from our website. It includes all these programming tutorials along with source code samples.

VBScript and VB6 - SetMouseSpotSize.vbs

```
' create video capturer activex object
Set capturer = CreateObject("BytescoutScreenCapturing.Capturer")

' set output video file name to .WMV or .AVI file
capturer.OutputFileName = "Captured.wmv"

' set capturing type to the caScreen =3 to capture the entire screen
capturer.CapturingType = 3

' output video width
capturer.OutputWidth = 640

' output video height
capturer.OutputHeight = 480

' uncomment to set Bytescout Lossless Video format output video compression method
' do not forget to set file to .avi format if you use Video Codec Name
' capturer.CurrentVideoCodecName = "Bytescout Lossless";
```

```
' set mouse spot radius
capturer.MouseSpotRadius = 100

' uncomment to enable recording of semitransparent or layered windows (Warning: may
cause mouse cursor flickering)
' capturer.CaptureTransparentControls = true

MsgBox "This script will record 640x480 video from entire screen for 15 seconds.
Output video will go to EntireScreenCaptured.avi"

' run video capturing
capturer.Run()

' IMPORTANT: if you want to check for some code if need to stop the recording then
make sure you are
' using Thread.Sleep(1) inside the checking loop, so you have the loop like
' Do
' Thread.Sleep(1)
' While StopButtonNotClicked

' wait for 15 seconds (15000 msec)
WScript.Sleep(15000)

' stop capturing
capturer.Stop()

' destroy Capturer object so the video will be saved into the disk
Set capturer = Nothing
```
