

How to use WEBM output for video in VBScript and VB6 with ByteScout Screen Capturing SDK

This tutorial will show how to use WEBM output for video in VBScript and VB6

The documentation is designed to help you to implement the features on your side. What is ByteScout Screen Capturing SDK? It is the screen video recording SDK helps in quick implementation of screen video recording. WMV, AVI, WebM output options are available with adjustable quality, video size, framerate and video and audio codec. Includes special features like live multiple blacking out of selected areas, recording from web cam as main source and as overlay, optional watermarks for output video. It can help you to use WEBM output for video in your VBScript and VB6 application.

This rich sample source code in VBScript and VB6 for ByteScout Screen Capturing SDK includes the number of functions and options you should do calling the API to use WEBM output for video. Just copy and paste the code into your VBScript and VB6 application's code and follow the instruction. Test VBScript and VB6 sample code examples whether they respond your needs and requirements for the project.

Trial version of ByteScout Screen Capturing SDK is available for free. Source code samples are included to help you with your VBScript and VB6 app.

Source Code Files:

```
' create video capturer activex object
Set capturer = CreateObject("BytescoutScreenCapturing.Capturer")

capturer.AudioEnabled = true

' set output video file name to .WEBM
capturer.OutputFileName = "EntireScreenCaptured.webm"

' set WEBM/WMV bitrate
capturer.WMVVideoBitrate = 1024*1024*1024

' set capturing type to the caScreen =3 to capture the entire screen
capturer.CapturingType = 3

' output video width
capturer.OutputWidth = 1920

' output video height
capturer.OutputHeight = 1080

' uncomment to set Bytescout Lossless Video format output video compression method
' do not forget to set file to .avi format if you use Video Codec Name
' capturer.CurrentVideoCodecName = "Bytescout Lossless";

' uncomment to enable recording of semitransparent or layered windows (Warning: may ca
' capturer.CaptureTransparentControls = true

MsgBox "This script will record 640x480 video from entire screen for 15 seconds. Output

' run video capturing
capturer.Run()

' IMPORTANT: if you want to check for some code if need to stop the recording then make
' using Thread.Sleep(1) inside the checking loop, so you have the loop like
' Do
' Thread.Sleep(1)
' While StopButtonNotClicked

' wait for 15 seconds (15000 msec)
WScript.Sleep(15000)

' stop capturing
capturer.Stop()

' destroy Capturer object so the video will be saved into the disk
Set capturer = Nothing

MsgBox "Done"
```
