

How to fix audio recording not working in Windows with ByteScout Screen Capturing SDK

How to code in Windows to fix audio recording not working with this step-by-step tutorial

With this source code sample you may quickly learn how to fix audio recording not working in Windows. ByteScout Screen Capturing SDK is the SDK for developers for quick implementation of screen video recording. The SDK records screen into video or into a series of screenshots. Can also record audio. Saves video into AVI, WMV and Google's WebM. Output video quality, size, resolution or framerate can be adjusted easily. Provides additional tools for privacy features like blacking out on screen areas with sensitive information on screen right during recording. Supports web camera as input and can add instant text and images into video output. It can be used to fix audio recording not working using Windows.

The SDK samples like this one below explain how to quickly make your application do fix audio recording not working in Windows with the help of ByteScout Screen Capturing SDK. Just copy and paste the code into your Windows application's code and follow the instruction. Enjoy writing a code with ready-to-use sample Windows codes.

Source Code Files:

If you have no sound in Screen Capturing then try the following: If you are running Windows 10
**[!] Before attempting this solution, make sure your Windows is fully up-to-date and your audio drivers are updated.

Solution:

1. Press Windows Key + R to open Run
2. type "control mmsys.cpl sounds" (without the quotes) and hit Enter
3. Click the Recording tab and check if the Stereo Mix device is there
 - If yes, right-click on it and select Enable then restart the Screen Capturing app
 - If no, right-click in a blank area and make sure Show Disabled Devices is checked then click on Stereo Mix and select Enable
4. Enjoy!
