

How to create XLSX in C# and ByteScout Spreadsheet SDK

Tutorial on how to create XLSX in C#

Create XLSX is easy to implement in C# if you use these source codes below. ByteScout Spreadsheet SDK is the SDK that can write and read, modify and calculate Excel and CSV spreadsheets. Most popular formulas are supported. You may import or export data to and from CSV, XML, JSON as well as to and from databases, arrays and you can use it to create XLSX with C#.

You will save a lot of time on writing and testing code as you may just take the C# code from ByteScout Spreadsheet SDK for create XLSX below and use it in your application. This C# sample code is all you need for your app. Just copy and paste the code, add references (if needs to) and you are all set! Implementing C# application typically includes multiple stages of the software development so even if the functionality works please test it with your data and the production environment.

You can download free trial version of ByteScout Spreadsheet SDK from our website to see and try many others source code samples for C#.

Program.cs

```
using System;
using System.Collections.Generic;
using System.Text;
using System.Diagnostics;
using Bytescout.Spreadsheet;
using System.IO;

namespace CSharp
{
    class Program
    {
        static void Main(string[] args)
        {
            // Create new Spreadsheet
            Spreadsheet document = new Spreadsheet();

            // Add new worksheet
            Worksheet worksheet = document.Workbook.Worksheets.Add("HelloWorld");

            // Set cell value
            worksheet.Cell(0, 0).Value = "Hello, World!";

            if (File.Exists("Output.xlsx"))
            {
                File.Delete("Output.xlsx");
            }

            // Save document
            document.SaveAs("Output.xlsx");

            // Close Spreadsheet
            document.Close();

            // open generated XLS document in default program
            Process.Start("Output.xlsx");
        }
    }
}
```
