

How to import from JSON in C# with ByteScout Spreadsheet SDK

This tutorial will show how to import from JSON in C#

The sample source codes on this page shows how to import from JSON in C#. ByteScout Spreadsheet SDK is the SDK that can write and read, modify and calculate Excel and CSV spreadsheets. Most popular formulas are supported. You may import or export data to and from CSV, XML, JSON as well as to and from databases, arrays and you can use it to import from JSON with C#.

This rich sample source code in C# for ByteScout Spreadsheet SDK includes the number of functions and options you should do calling the API to import from JSON. This C# sample code is all you need for your app. Just copy and paste the code, add references (if needs to) and you are all set! This basic programming language sample code for C# will do the whole work for you to import from JSON.

Free trial version of ByteScout Spreadsheet SDK is available on our website. Documentation and source code samples are included.

C# - Program.cs

```
using System.Diagnostics;
using System.IO;
using Bytescout.Spreadsheet;

namespace ImportFromJSON
{
    class Program
    {
        static void Main(string[] args)
        {
            using (Spreadsheet spreadsheet = new Spreadsheet())
            {
                // Load JSON string from file
                string jsonString = File.ReadAllText("sample.json");

                // Import JSON
                spreadsheet.ImportFromJSON(jsonString);

                // Save spreadsheet
                spreadsheet.SaveAsXLS("result.xls");

                // Open the result file in default associated
                application
                Process.Start("result.xls");
            }
        }
    }
}
```

```
}  
}
```
