

How to change document properties in VB.NET with ByteScout Spreadsheet SDK

The tutorial below will demonstrate how to change document properties in VB.NET

Every ByteScout tool contains example VB.NET source codes that you can find here or in the folder with installed ByteScout product. Want to change document properties in your VB.NET app? ByteScout Spreadsheet SDK is designed for it. ByteScout Spreadsheet SDK is the library (SDK) that is capable of writing, reading, modifying and calculating Excel and CSV spreadsheets. Most popular formulas can be calculated and recalculated with Excel installed. You may import or export data to and from CSV, XML, JSON as well as to and from databases, arrays.

The SDK samples like this one below explain how to quickly make your application do change document properties in VB.NET with the help of ByteScout Spreadsheet SDK. Just copy and paste the code into your VB.NET application's code and follow the instruction. Further enhancement of the code will make it more vigorous.

Trial version of ByteScout Spreadsheet SDK can be downloaded for free from our website. It also includes source code samples for VB.NET and other programming languages.

VB.NET - Module1.vb

```
Imports System
Imports System.Collections.Generic
Imports System.Text
Imports System.IO
Imports Bytescout.Spreadsheet

Module Module1

    Sub Main()
        ' Create new Spreadsheet
        Dim document As New Spreadsheet()

        ' Add new worksheet
        Dim worksheet As Worksheet = document.Workbook.Worksheets.Add("Sheet1")

        ' Set some properties
        document.Workbook.Properties.ApplicationName = "Bytescout Spreadsheet SDK"
        document.Workbook.Properties.Author = "Bytescout"
        document.Workbook.Properties.Comments = "Some comments"
        document.Workbook.Properties.Subject = "Some subject"

        ' remove output file if already exists
```

```
If File.Exists("Output.xls") Then
    File.Delete("Output.xls")
End If

' Save document
document.SaveAs("Output.xls")

' Close Spreadsheet
document.Close()

' open in default spreadsheets viewer/editor
Process.Start("Output.xls")
End Sub

End Module
```
