

## How to copy range in VB.NET using ByteScout Spreadsheet SDK

The tutorial below will demonstrate how to copy range in VB.NET

These sample source codes on this page below are demonstrating how to copy range in VB.NET. ByteScout Spreadsheet SDK can copy range. It can be used from VB.NET. ByteScout Spreadsheet SDK is the SDK to create, read, modify and calculate spreadsheets. Formula calculations are supported, import and export to and from JSON, CSV, XML, databases, arrays.

You will save a lot of time on writing and testing code as you may just take the VB.NET code from ByteScout Spreadsheet SDK for copy range below and use it in your application. In your VB.NET project or application you may simply copy & paste the code and then run your app! Test VB.NET sample code examples whether they respond your needs and requirements for the project.

Trial version of ByteScout Spreadsheet SDK can be downloaded for free from our website. It also includes source code samples for VB.NET and other programming languages.

### Source Code Files:

Program.vb

```
Imports System.Diagnostics
Imports System.IO
Imports ByteScout.Spreadsheet

Class Program
    Friend Shared Sub Main(args As String())
        ' Open spreadsheet from file
        Dim document As New Spreadsheet()
        document.LoadFromFile("example.xls")

        ' Get first worksheet
        Dim worksheet As Worksheet = document.Workbook.Worksheets(0)

        ' Select cell range
        Dim range As Range = worksheet.Range("A2:B8")

        ' Copy range to C10 cell
        range.CopyInto("C10")

        ' Delete output file if exists
        If File.Exists("changed.xls") Then
            File.Delete("changed.xls")
        End If

        ' Save document
        document.SaveAs("changed.xls")

        ' Close spreadsheet
        document.Close()

        ' Open generated XLS document in default program
        Process.Start("changed.xls")
    End Sub
End Class
```
